Kettal is a family business established in Europe in 1966.

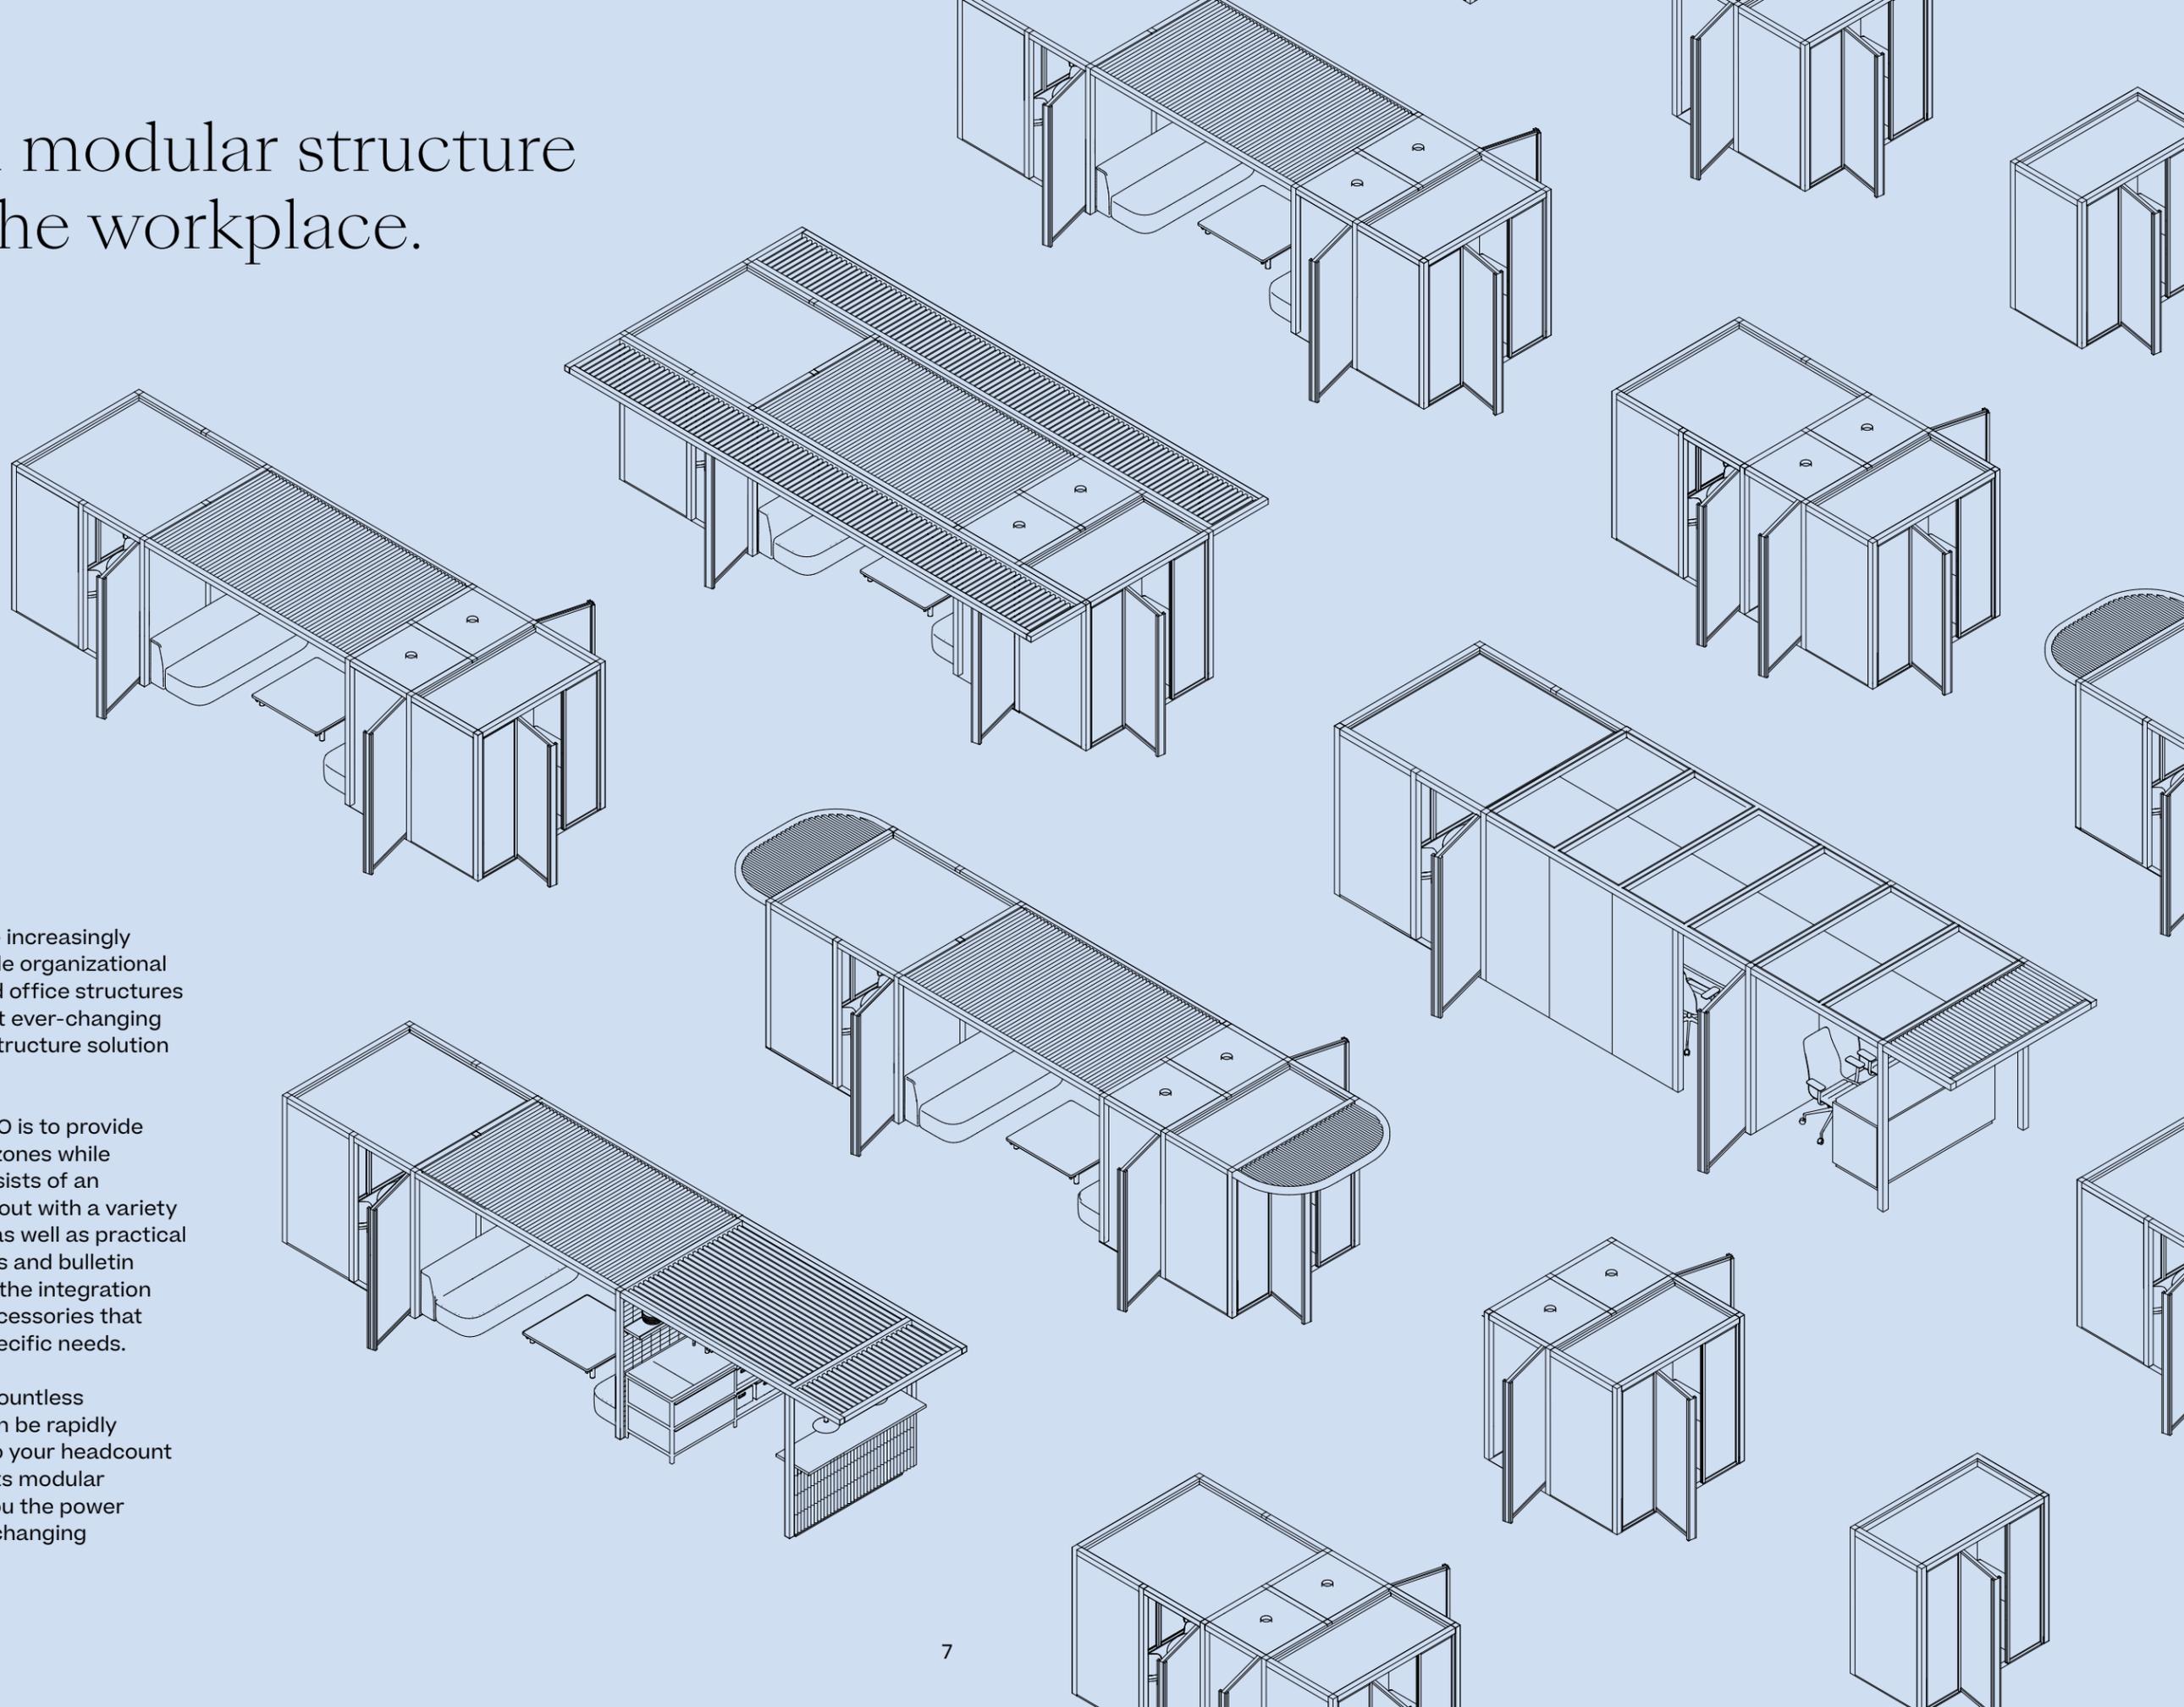

All of our products are manufactured 45km from Barcelona in a small coastal town. We pride ourselves on our European made quality. In-house manufacturing allows us to pay close attention to detail and gives us the ability to meet our clients' customization requirements, making each piece of Kettal furniture unique and exclusive.

The importance of research – both scientific and technological – has always been at the forefront of our product development. The high-quality products we offer today are the result of our spirit of innovation.

We have our own state of the art manufacturing plant where the product is designed, manufactured and tested locally.

Our manufacturing processes involve intense manual labor and 85% of Kettal products are handmade. Our handmade ethos means that we build strong yet beautiful Kettal pieces that display an exquisite attention to detail.

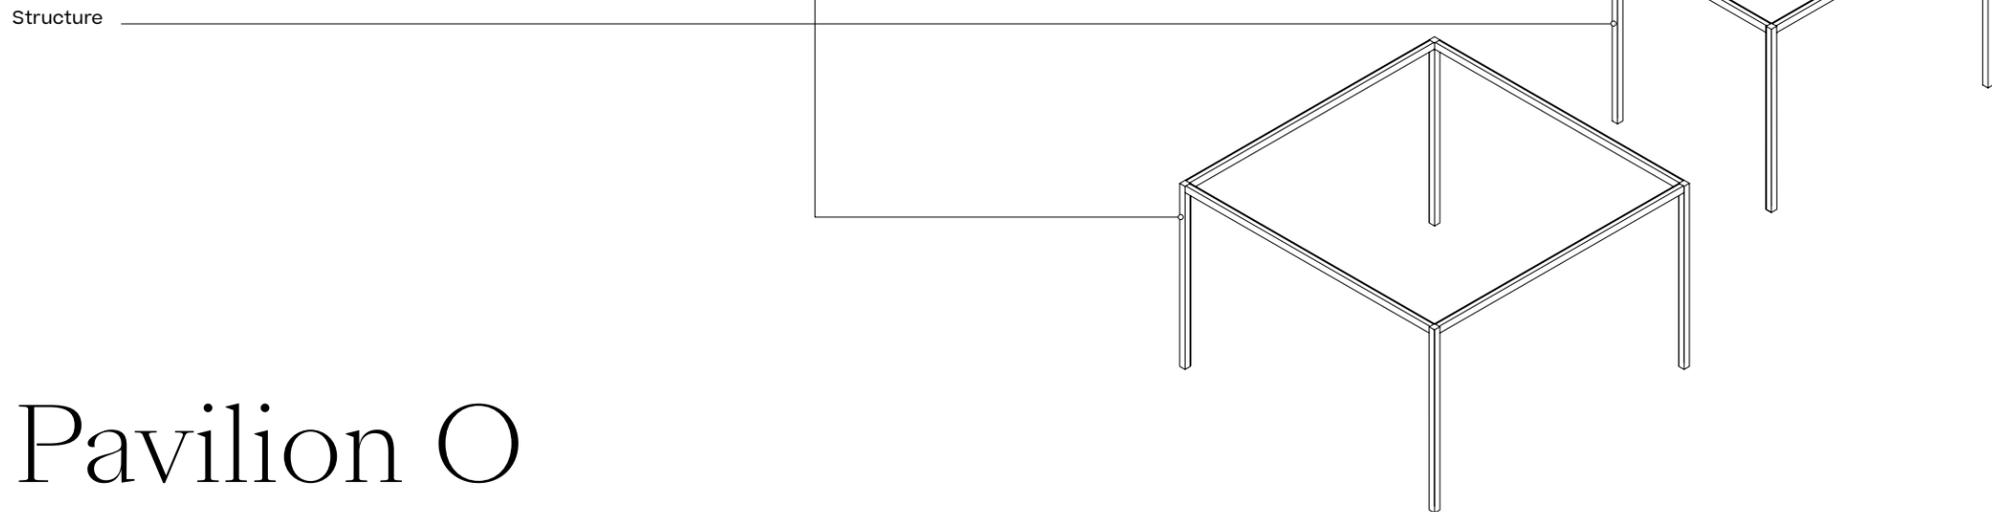

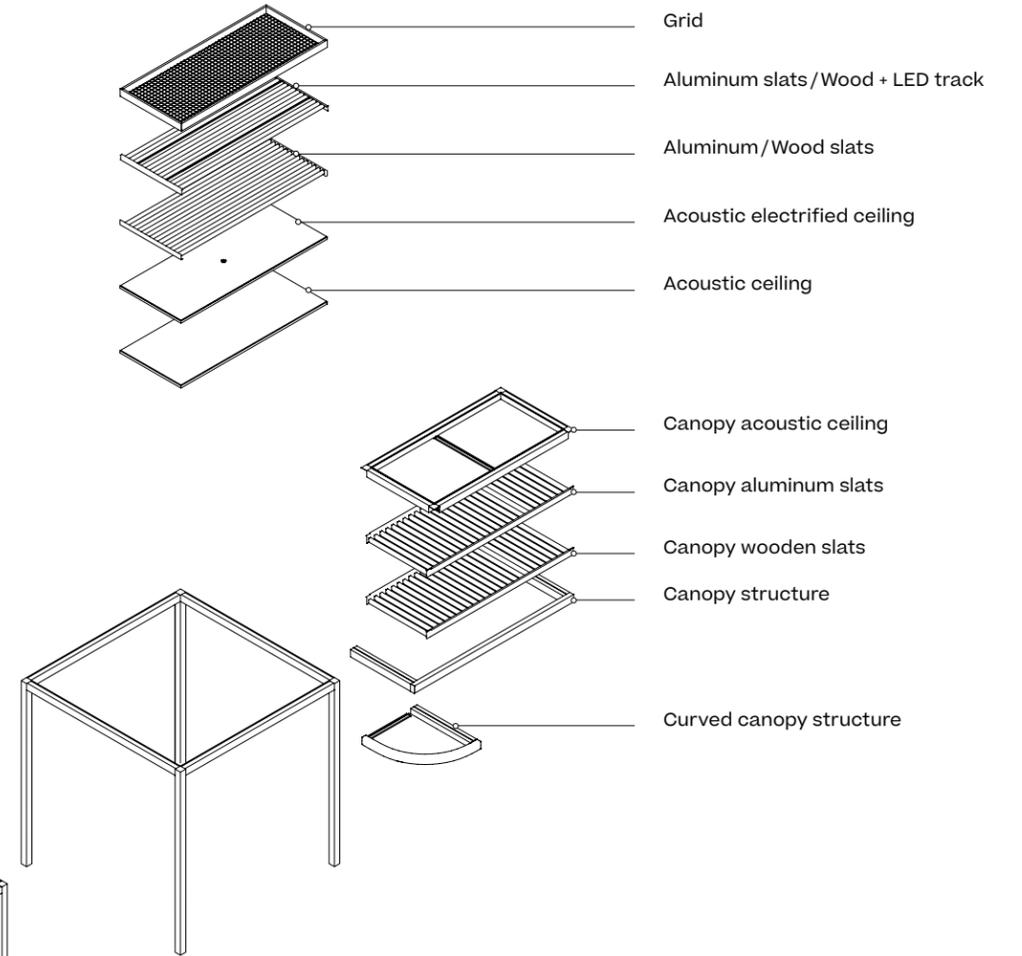

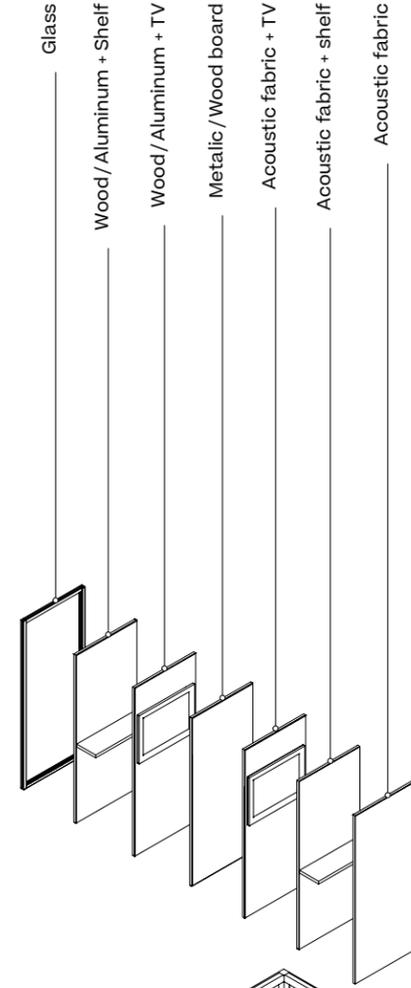

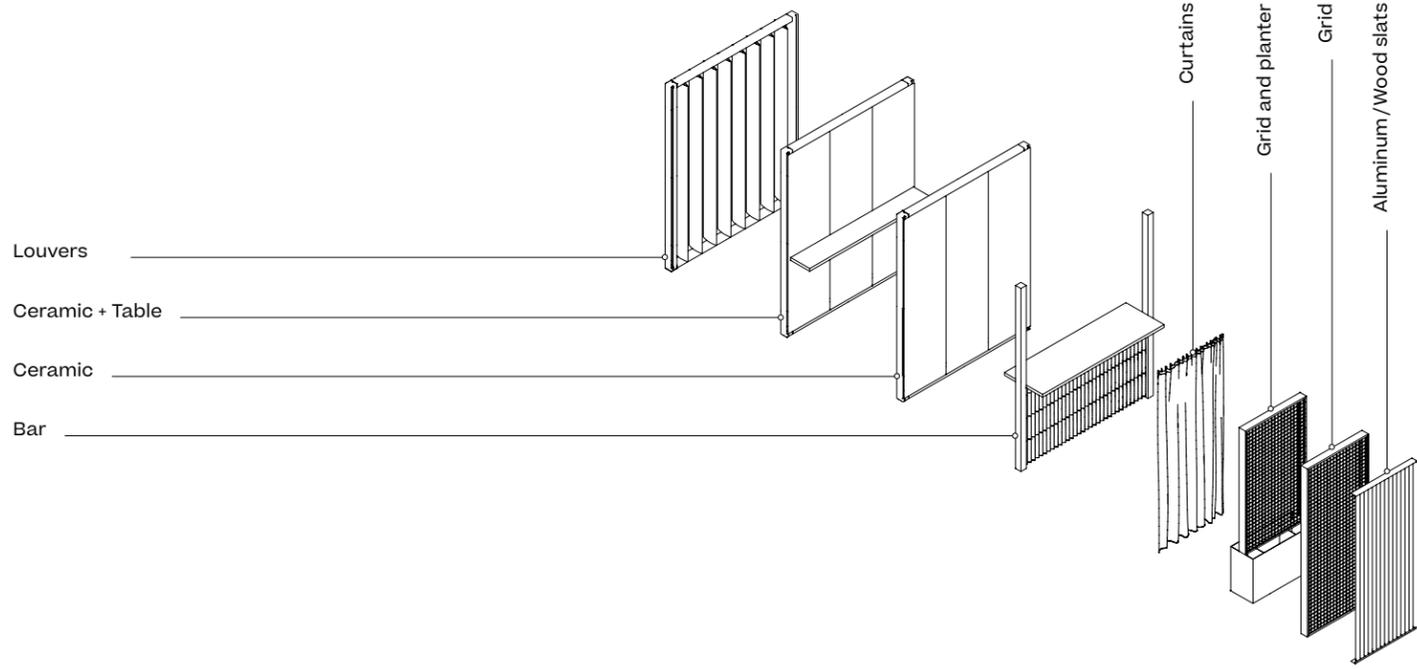

Pavilion O, a modular structure to reinvent the workplace.

Many companies have adapted to the increasingly unpredictable market by creating agile organizational structures. To be agile, they also need office structures that can be easily reconfigured to suit ever-changing requirements. Pavilion O is the ideal structure solution for these new work environments.

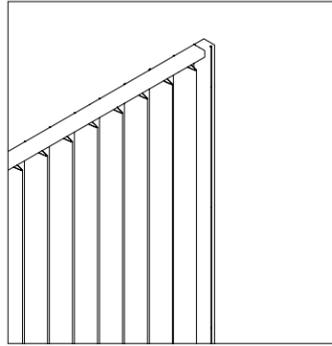

The principal function of our Pavilion O is to provide a flexible way of dividing offices into zones while offering enclosed workspaces. It consists of an aluminum structure that can be built out with a variety of materials: glass, wood and fabric, as well as practical fittings: shelving, TV unit, whiteboards and bulletin boards. Our Pavilion O also allows for the integration of electrical cables and functional accessories that can be tailored to your company's specific needs.

Pavilion O facilitates the creation of countless office and workspace layouts that can be rapidly adapted to accommodate changes to your headcount or department functions. Thanks to its modular nature, the Pavilion O system gives you the power to respond quickly to the constantly changing modern world of work.

Officespace

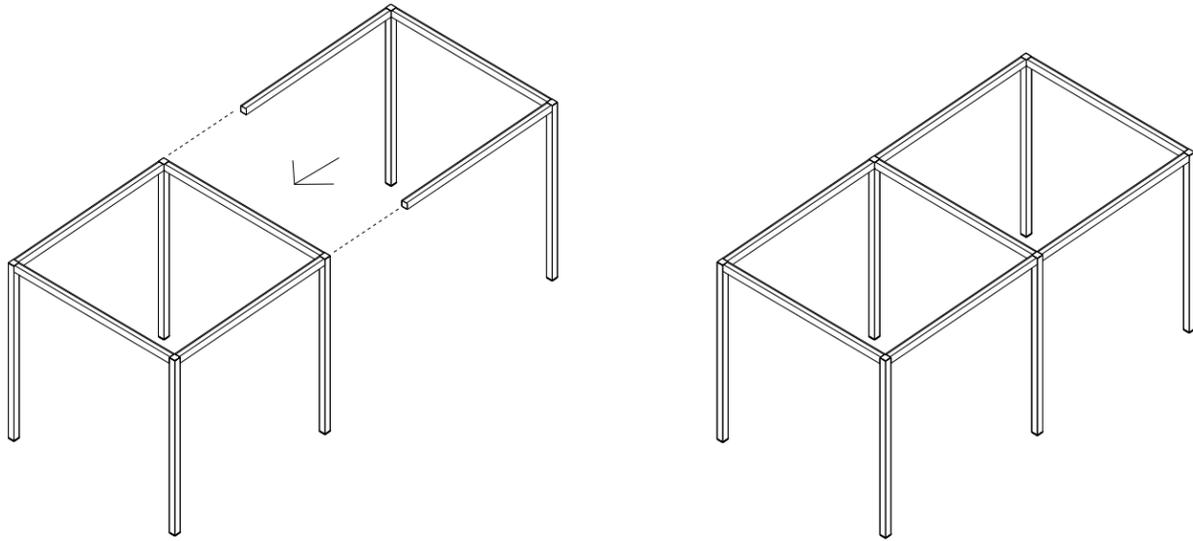

The need for flexible, open-plan workspaces is clear. Pavilion O allows you to define your own layouts in a way that meets both the demands of modern employees and the unique needs of your company. As if you were the architect of your own city, you can use Pavilion O to help you define your workplace's structure, private and public spaces, and overall flow.

A workplace resembling a living city, with its interconnected neighborhoods, networks and spaces.

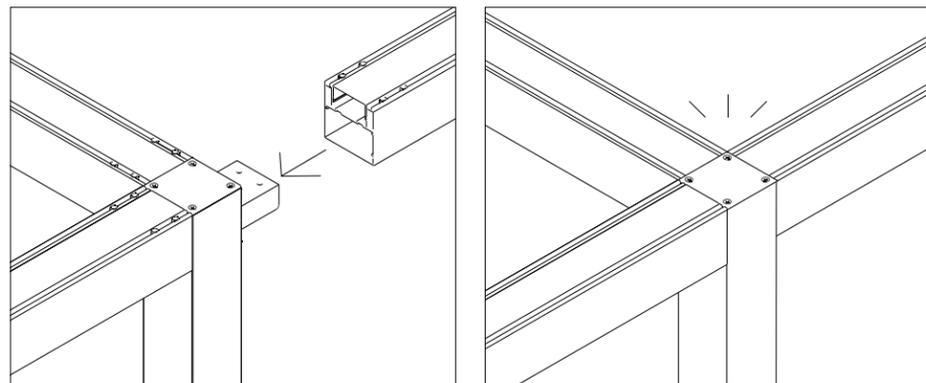

Modularity

Pavilion O adapts to the context of any modern workspace. It is a dynamic way to transform your office space, thereby increasing productivity and creativity amongst your teams. It gives you the option to create several spaces; from one-person private rooms to those that can accommodate the entire team.

Your office can be set up in a variety of different configurations. The basic structure conforms to the grid layout commonly used in office planning and it has ceiling heights that can adapt to all environments.

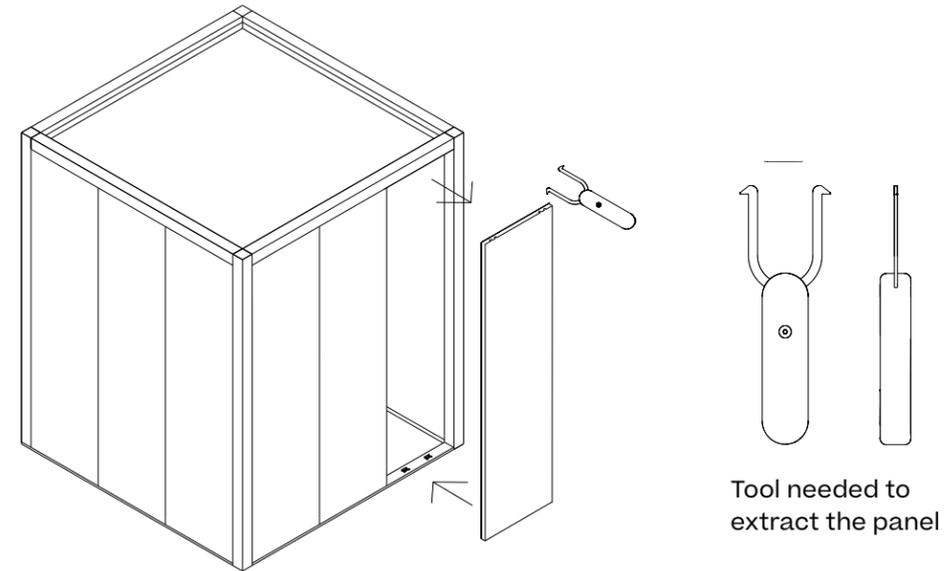

The ingenious square tube and corner connector system generates a sense of light and space.

Focus

Certain situations require your employees to increase their focus. It might be a meeting between them and a top client or it could be a puzzling problem that requires quiet analysis. Our system can help you create spaces that allow them to excel in such situations.

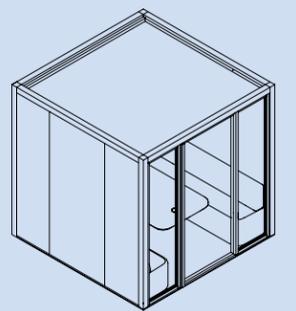

Spaces tailored for those occasions when isolated work is required.

Phonebooth

Privacy can be hard to come by in large open offices. Our Phonebooth O allows your employees to make calls or hold video conferences with unbroken focus and without disturbing the rest of the team. The Phonebooth O design is inspired by the traditional telephonebooth. They are an elegant yet functional solution for your office. Comfortable and echo-free, the Phonebooth O is also simple to install.

Meeting

Comfort and silence means better communication and better meetings.

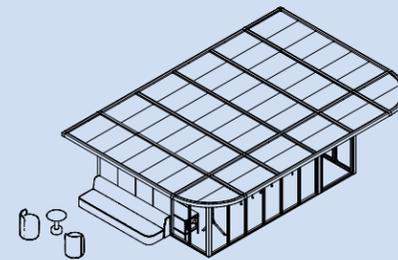

Whether it is a meeting with colleagues or clients, you want to optimize its effectiveness. Comfort is crucial — particularly when your meeting is long in duration. We recognize this and have designed accordingly. Our superior sound insulation provides a quiet, distraction-free environment for holding your meetings without disturbing those in the vicinity.

- Fabric or glass
- Faced external wall
- Air ventilation system
- LED lighting
- PIR sensor

Technical specifications

Since the introduction of computers, office structures and work habits have never undergone such a radical transformation as the one we are currently experiencing. Thanks to communication technology, offices are becoming public spaces. Many companies create open-plan and inspiring places in which employees and visitors can relax, hold meetings or spend the day working. The daily use of laptops, smartphones and tablets has given rise to new patterns of behavior that are now also observed in offices. Home automation, audiovisual media, network connections and booking rooms are necessary resources for day-to-day work in the office.

Unlock extra workspace potential with cutting edge technology.

Control managment

Description

A smart technology fully integrated. It's a fully integrated business space solutions that streamline workflows and resource management for smarter, more efficient workplaces. We work with the platforms that enables you to perform all your daily activities (calls, presentations, collaboration) in every one of your workspaces and manage them securely online.

Acoustic side panels 44 db

Description

All our panels are tested to ensure they meet the required acoustic levels. We have tested some of the wall combinations to provide guidelines with regard to acoustic levels. Acoustic performance varies depending on the material selection for each wall.

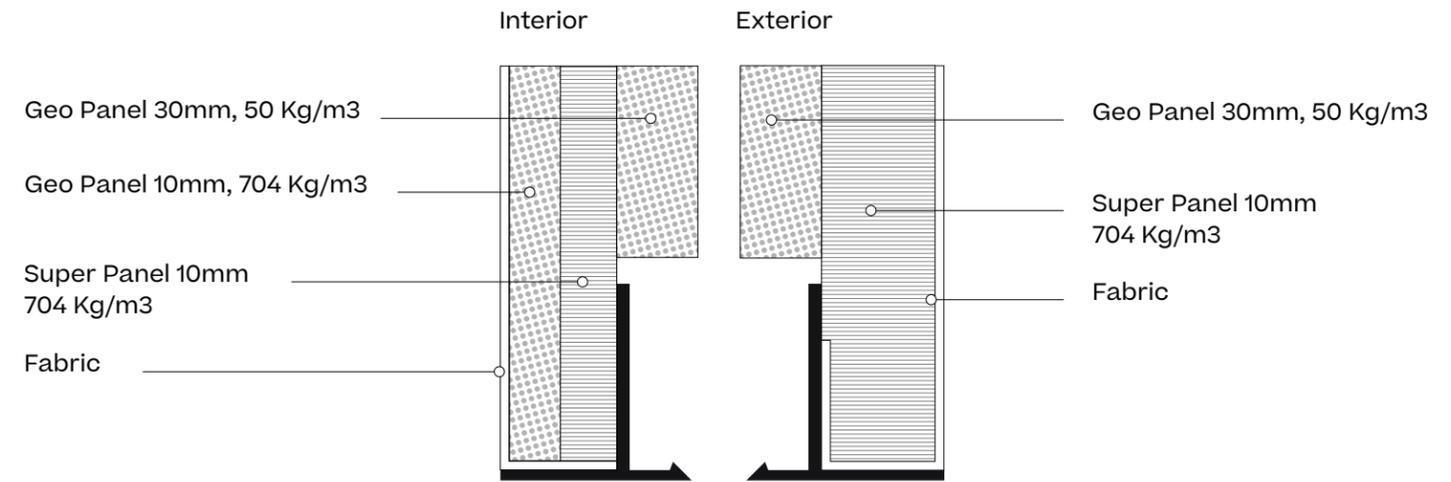

The O glass version offers excellent acoustic performance, creating a comfortable and efficient working environment. It is based on 3+3 and 6+6 laminates with a soundproofing membrane to provide an impressive acoustic performance of up to 44dB. We also offer a range of solid wall options in fabric and wood. Many of these alternative wall options offer excellent acoustic performance properties. Our laminated panels not only provide additional acoustic performance, but also come in a range of colors. As a result, you can customize your Pavilion O to reflect your brand image or simply to create a bright office space. In addition, the eco-friendly panels reduce and control reverberated noise within the Pavilion, further enhancing the overall soundproofing performance.

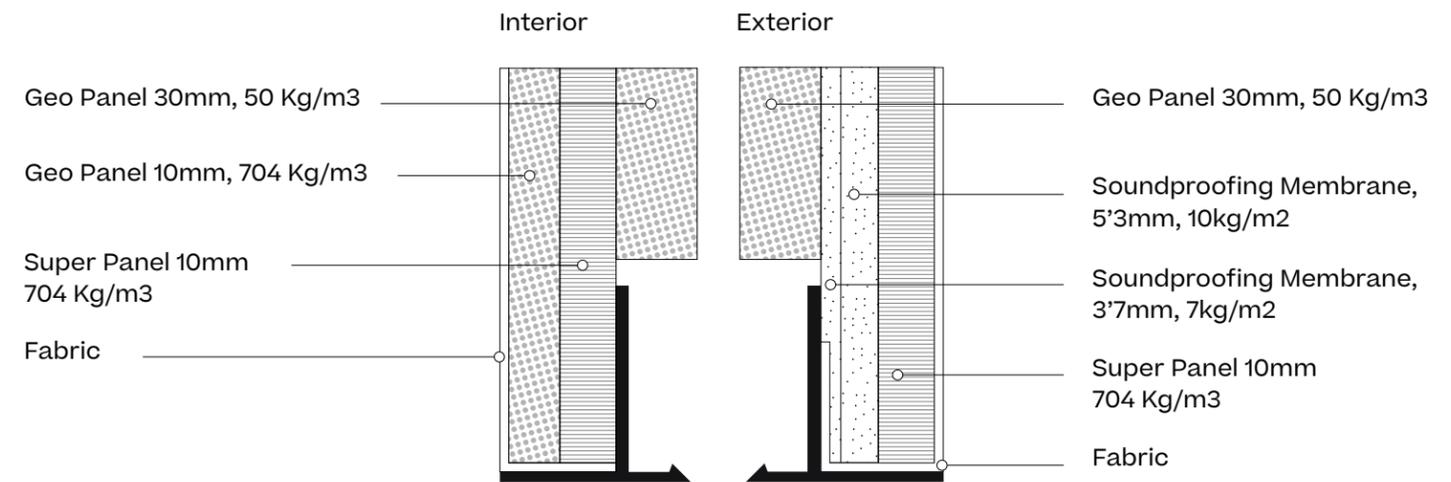

Key functions

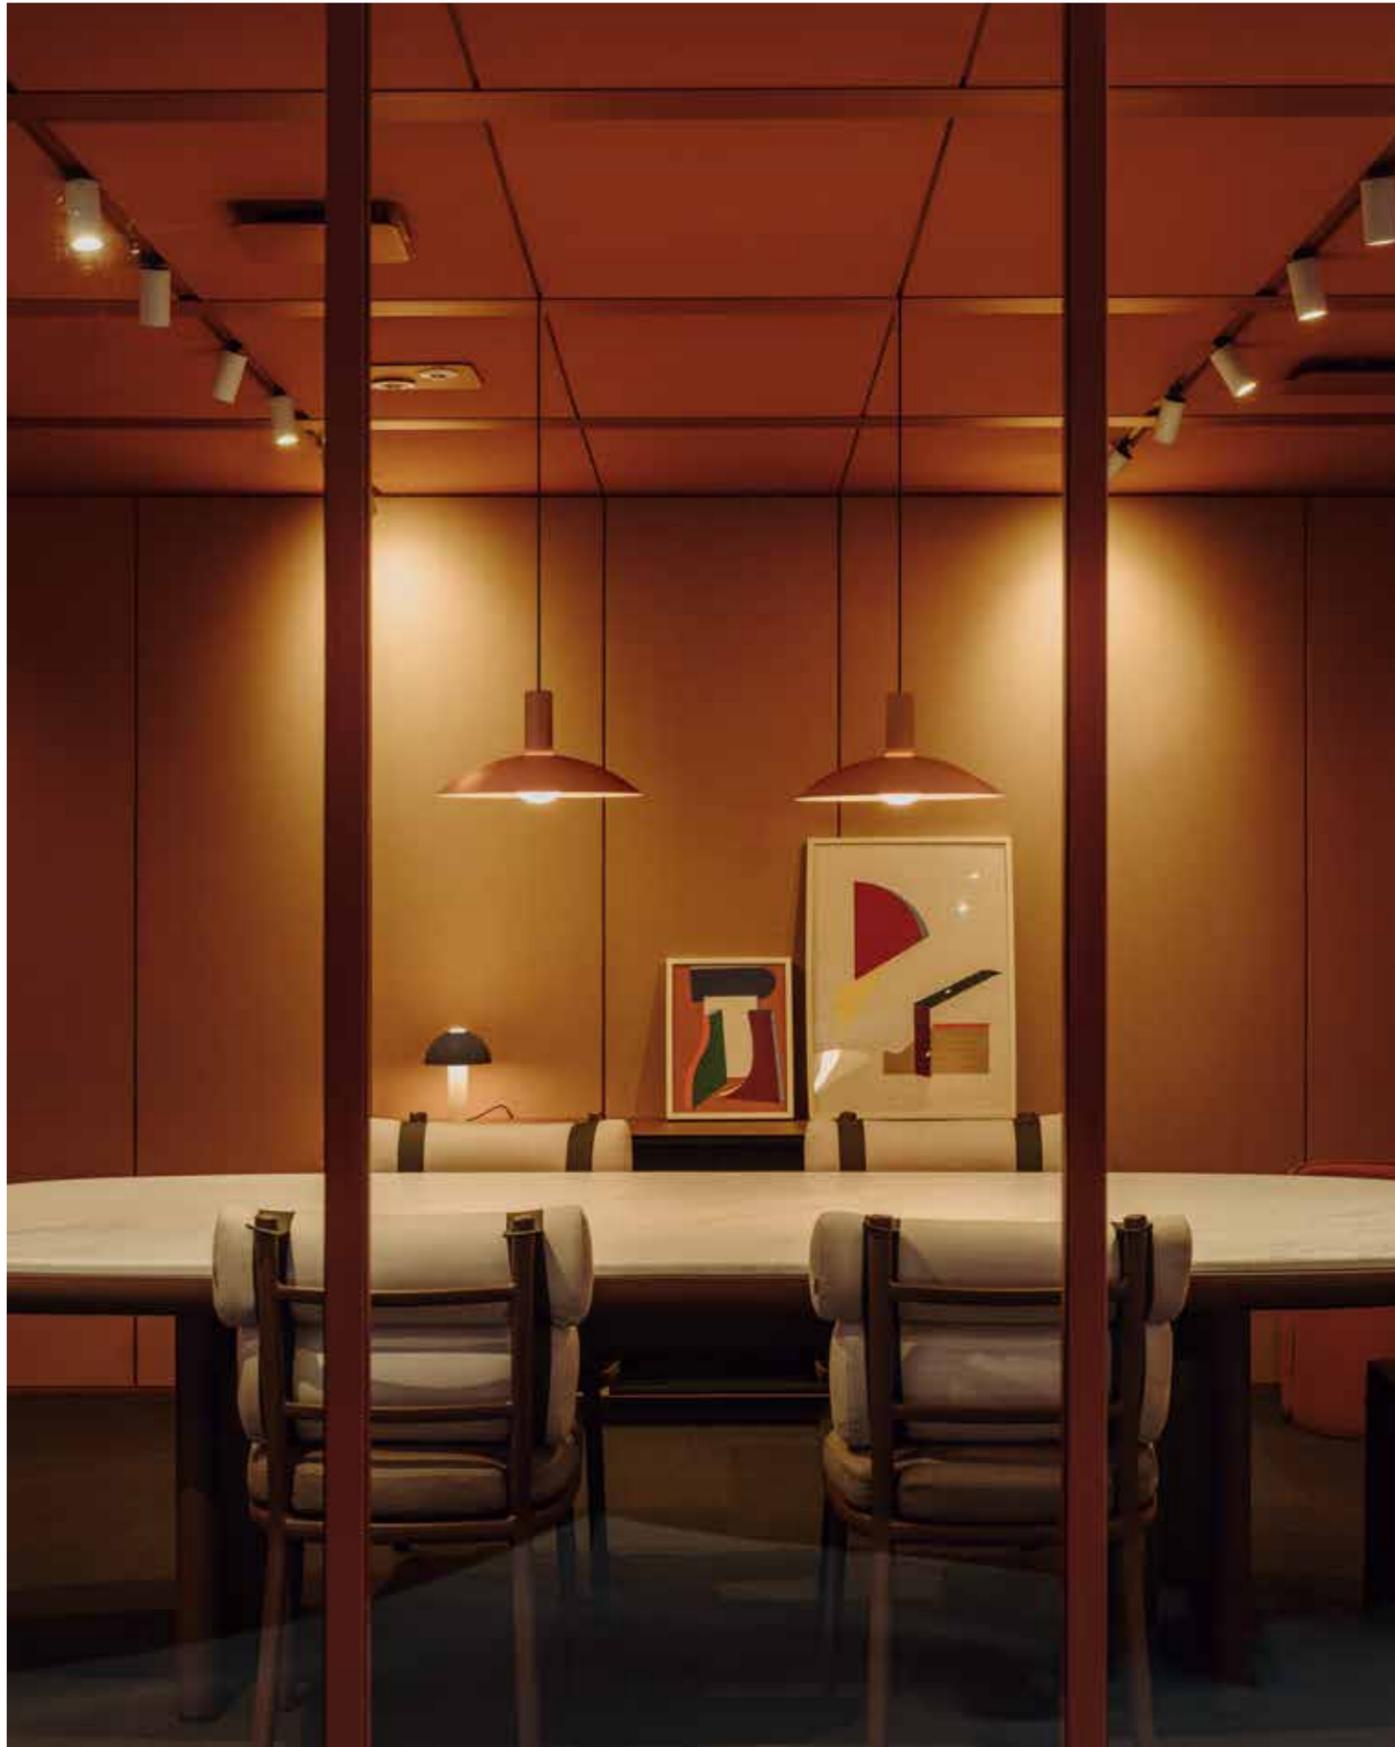

- Fire retardant M1

Lighting

A space cannot be designed without careful consideration of lighting. For this reason, we have created a new language of light, from the ground up, that elegantly integrates into the architecture.

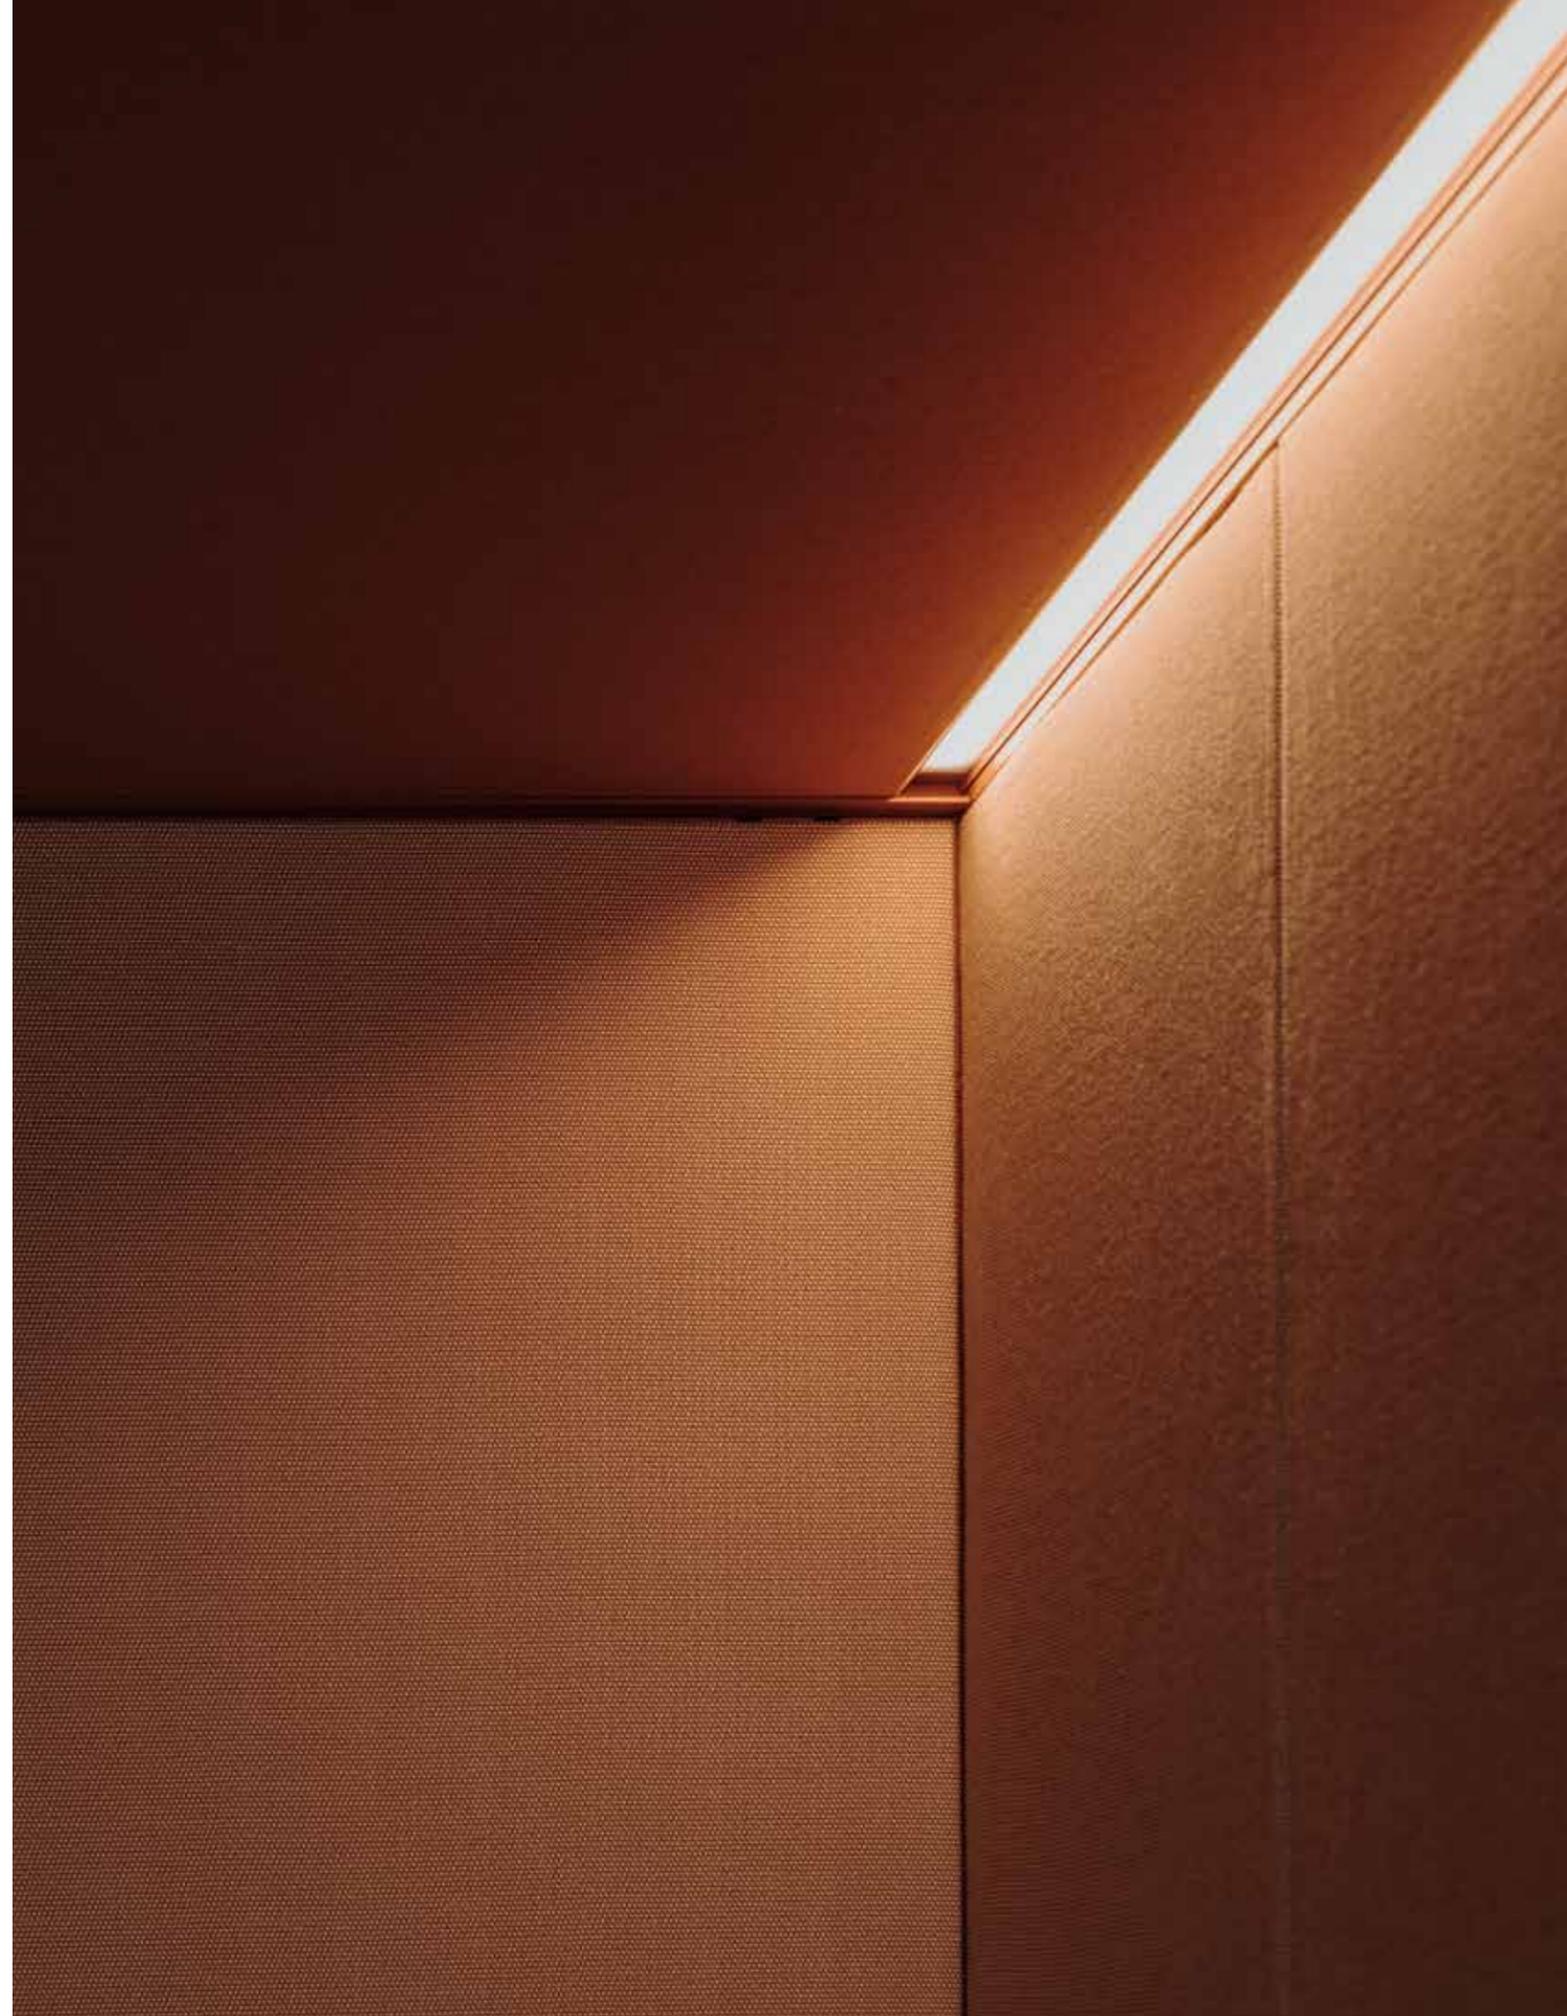

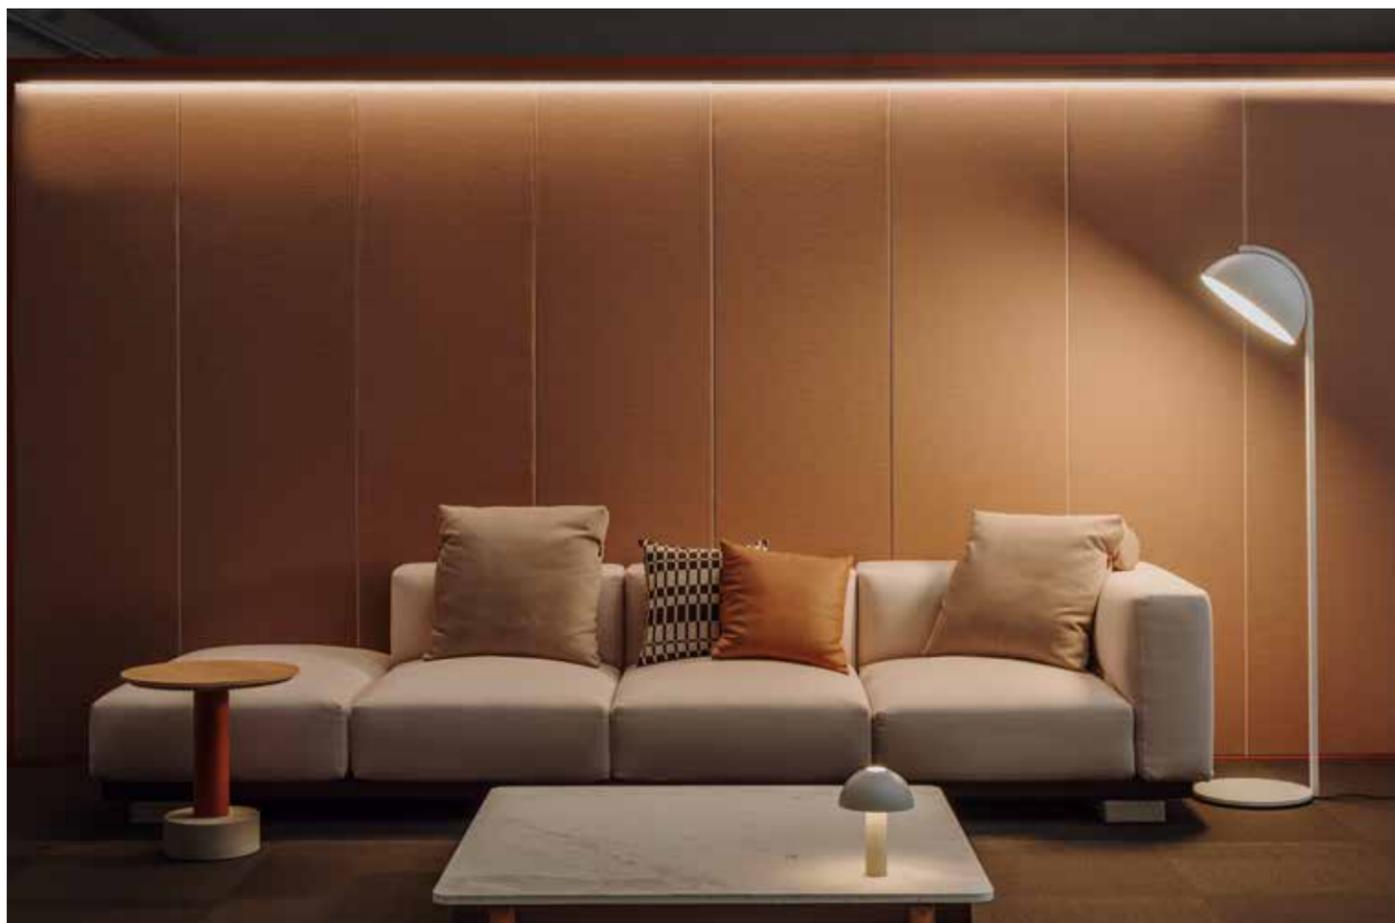

We are not just another lighting company. But we know an adequate amount of light and a clever placement improves mood and energy levels, which is essential to consider in the well running of the workspace.

Elegantly integrated lighting that rounds out your workspaces.

This lighting system is adaptable to all situations: conversation, concentration, relaxation and more. Form, function and performance is driving the fusion of technology and emotion.

LED Track Curtain

A recessed lighting system equipped with an LED light source. Specially designed for wall-washer lighting, the LED Curtain incorporates lenses to provide optimal light distribution. The LED Curtain range is available in different lengths which means it can be adjusted to suit any space, while its compact size facilitates simple integration within the Pavilion O system.

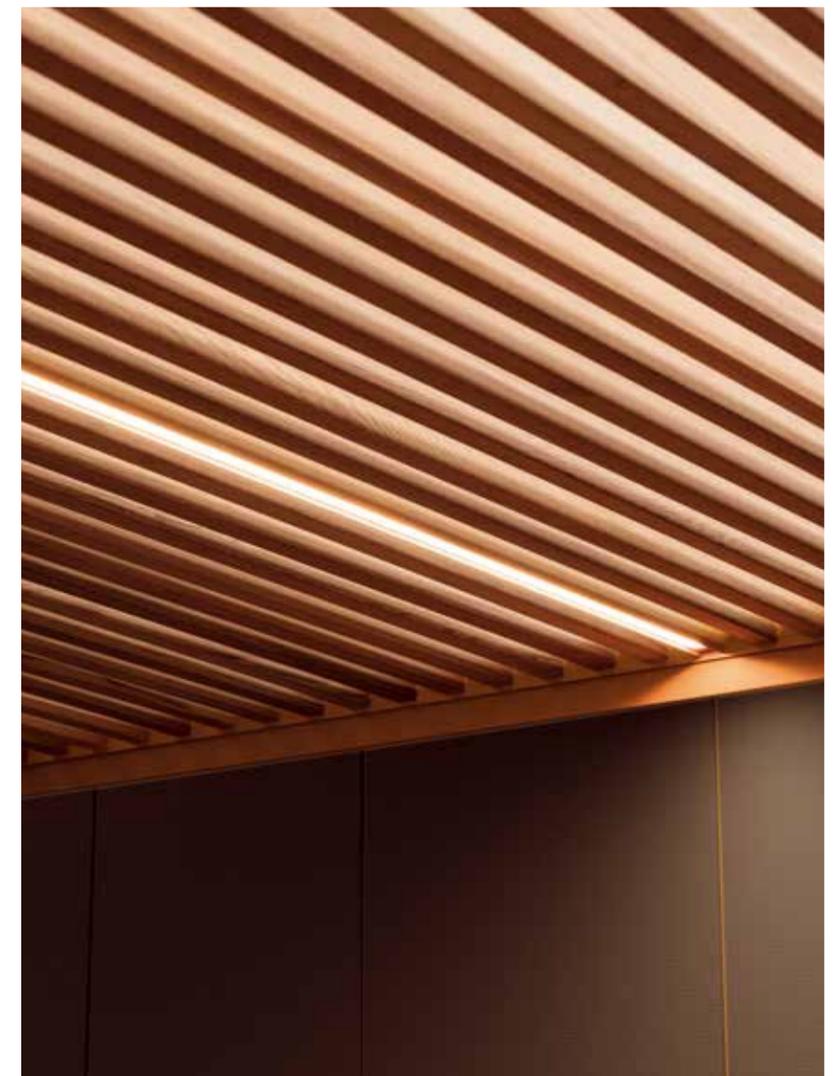

Lighting

LED Track

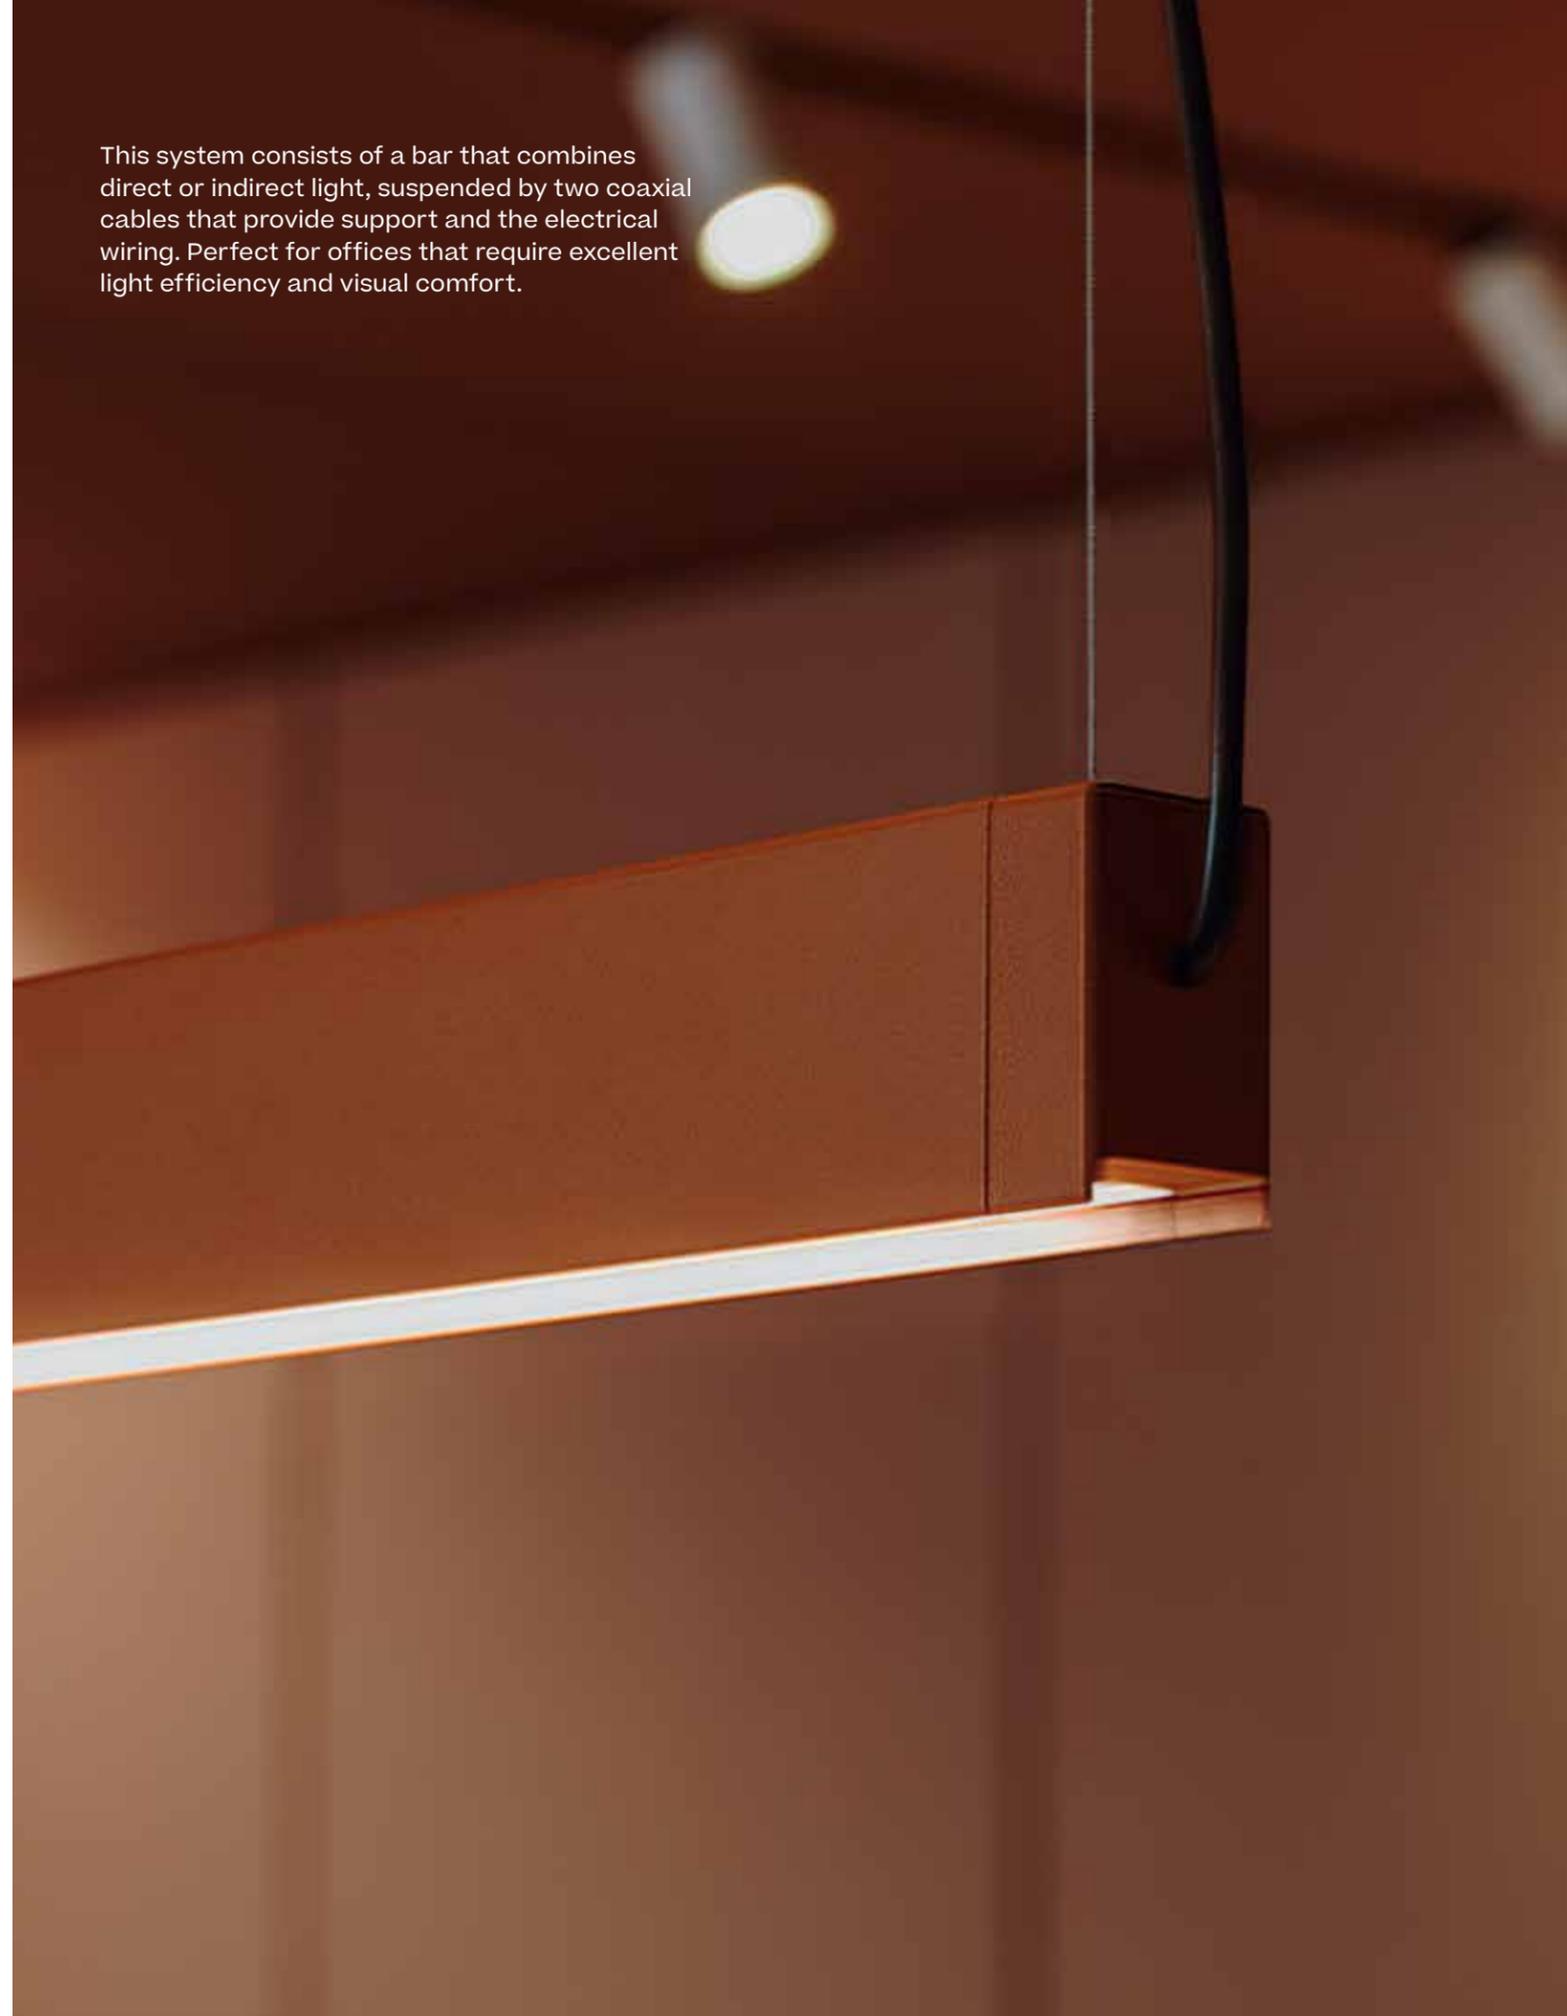

An integrated LED lighting system that offers solutions suited to any type of installation. It provides pleasant and efficient visual comfort, combined with high-quality performance and aesthetics.

LED Track Suspension

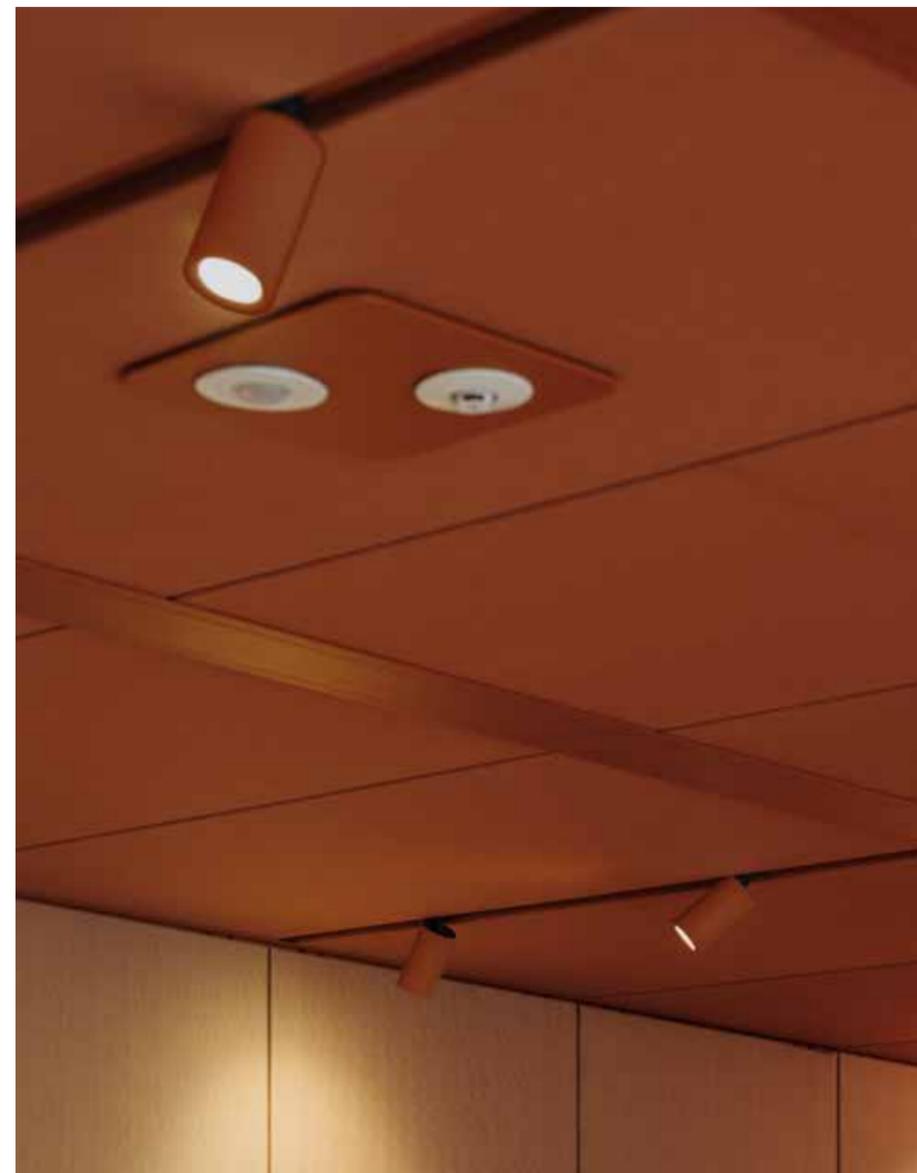

This system consists of a bar that combines direct or indirect light, suspended by two coaxial cables that provide support and the electrical wiring. Perfect for offices that require excellent light efficiency and visual comfort.

Our surface-mounted range that uses an LED light source. This system is composed of linear LED strips mounted on aluminum extrusion micro-profiles of varying lengths. These light modules are combined with adjustable 360° Dots spotlights that are available with different beam optics.

LED Track Articulated

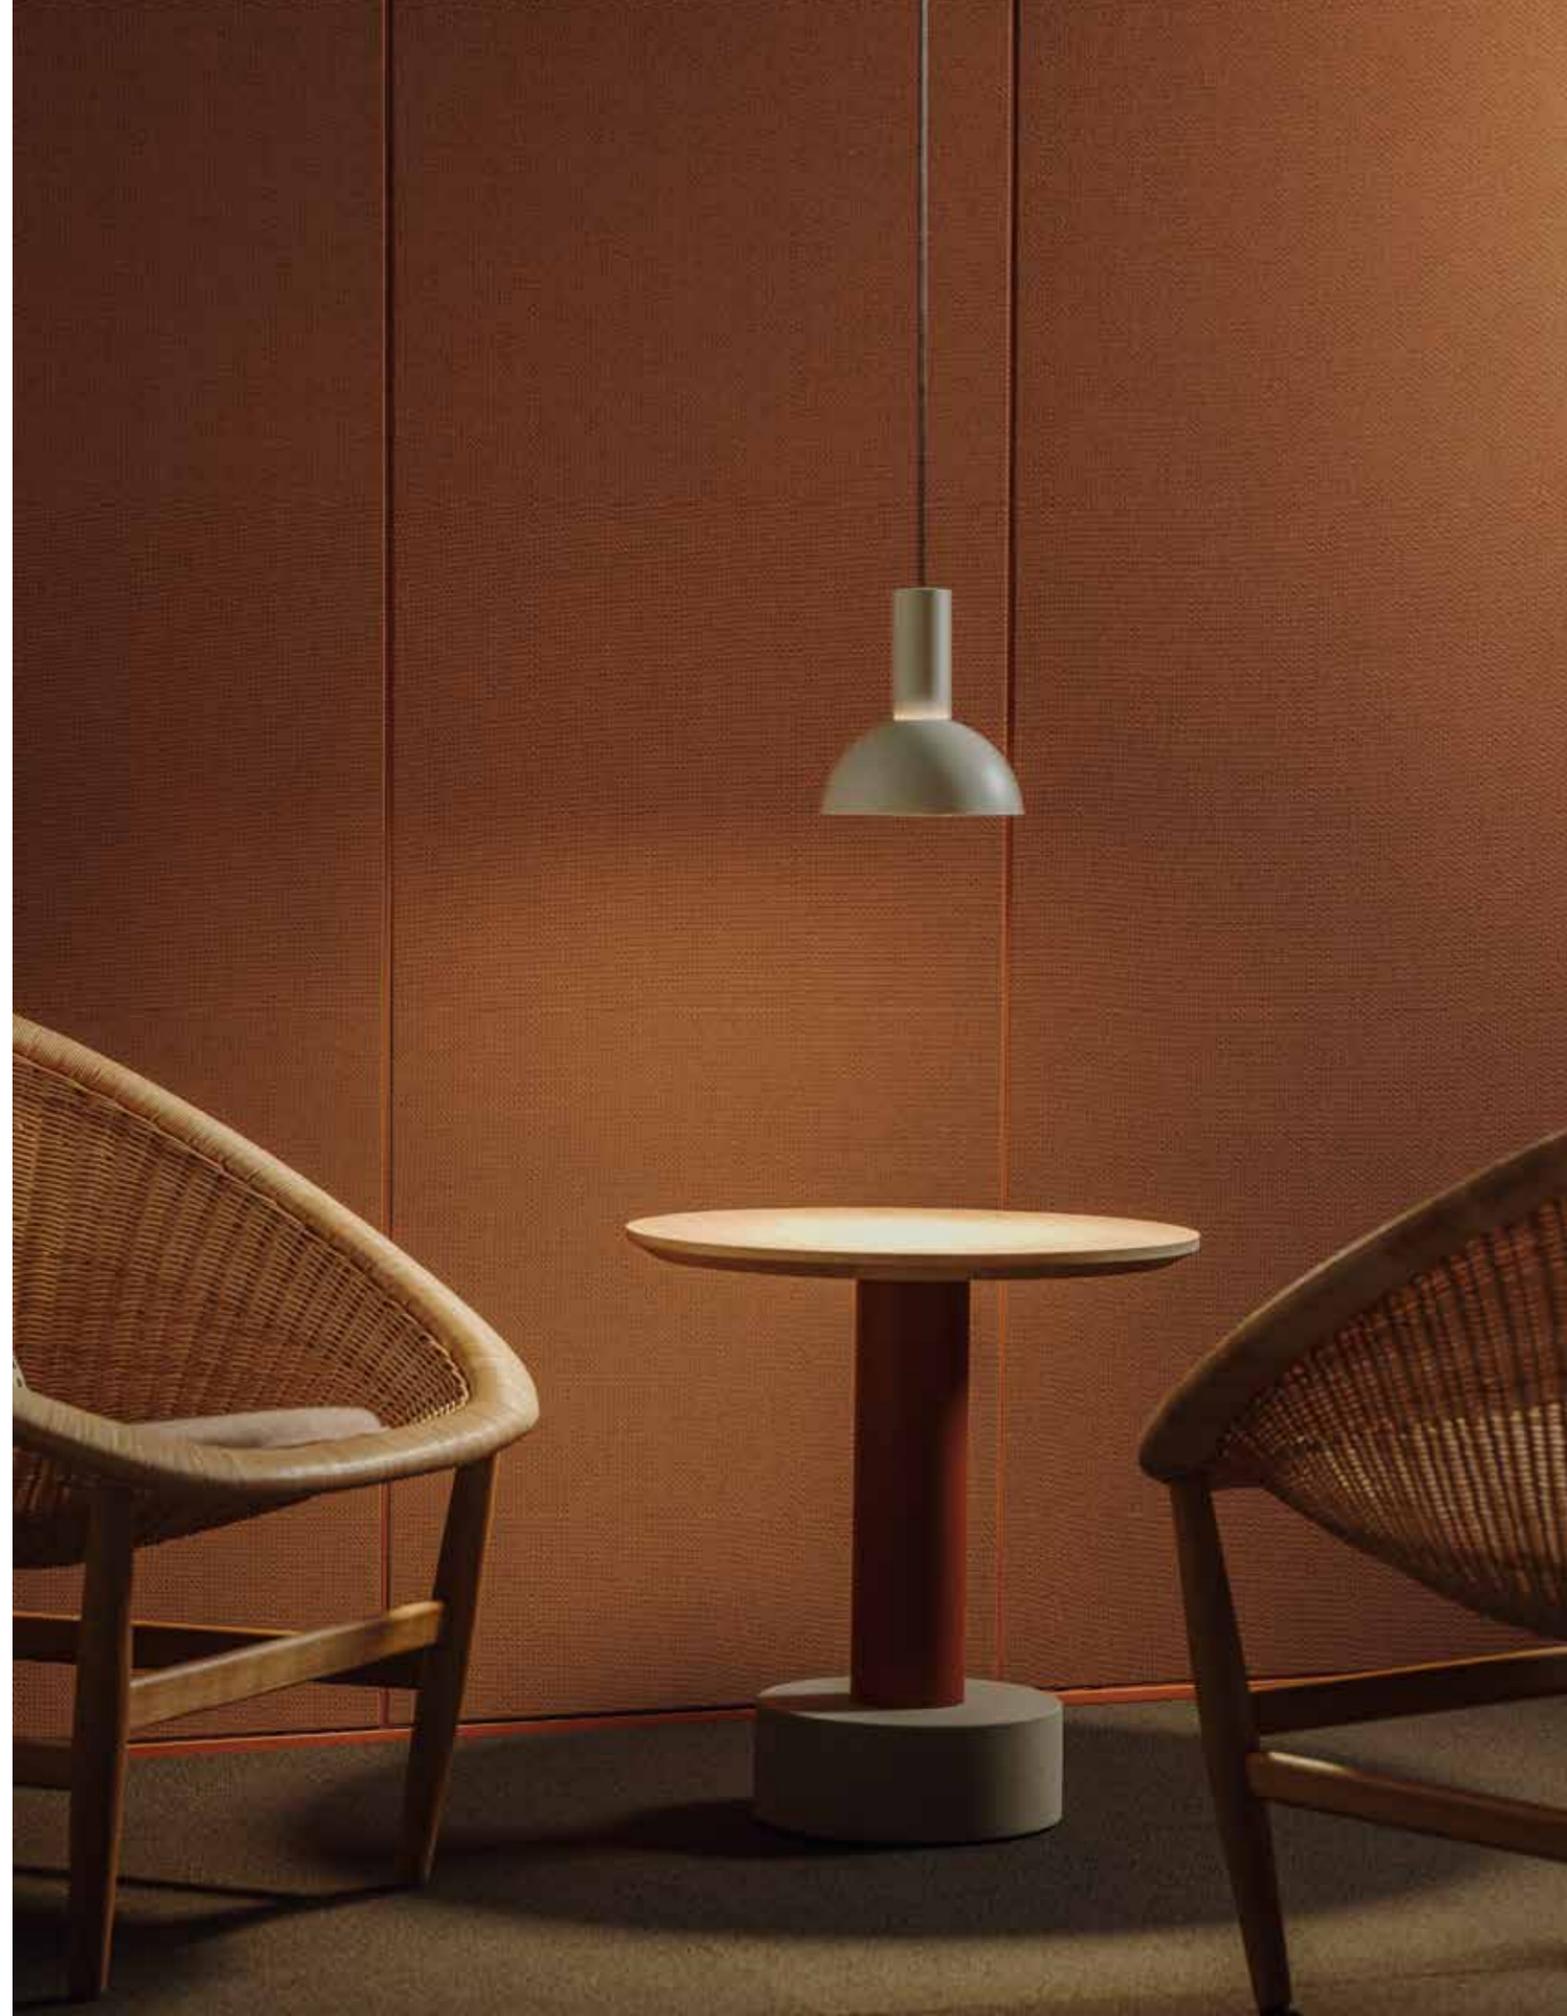

Dots Pendant

Lighting

This suspended light is based on the Dots spotlight system. With its two open and closed diffusers, it directs most of the light downwards. By directing most of the light downwards, the shade is molded to illuminate spaces while protecting peoples' eyes from any direct glare. The matte white interior of the elliptical shade helps create a uniform light that is ideal for both directed and general ambient lighting needs.

Dots Phonebooth

Lighting

The Dots Phonebooth is a professional table lamp with direct light. The base and diffuser are made of colored aluminum. It exceeds common lighting standards for applications in work and study environments.

Dots Floor

Dots lamps, manufactured in aluminum with LED lights, are available in two versions: a floor lamp with a circular base and planter lamp with a base that can be fastened to the product. The new Dots lamps have been developed for indoor and outdoor use. The height and direction can be adjusted to focus the light where it is needed.

Half Dome

The Half Dome is a great mountain with endless variations of lighting, sky situations and seasonal characteristics – the many images of which reflect the varied creative responses to this remarkable granite monolith. The moonlight has a particular size of diameter as people imagine it. The dimension of the Half Dome light follows our image of the moonlight size.

Dots Wall/Column

The Dots wall luminaries feature LED light sources and project light above or below the horizontal plane for an authentic washlighting effect, ideal for selectively illuminating corners, specific spaces, facility corridors, as well as walkways, access routes, signs and so on.

Furniture

We offer a wide range of durable products that allow you to create work environments and public spaces that are suitable for a wide variety of uses, both for individuals and for teams. These products also allow you to create areas where people can work in silence and with complete concentration.

Versatile and timeless furniture designed by the most important names in the international design scene.

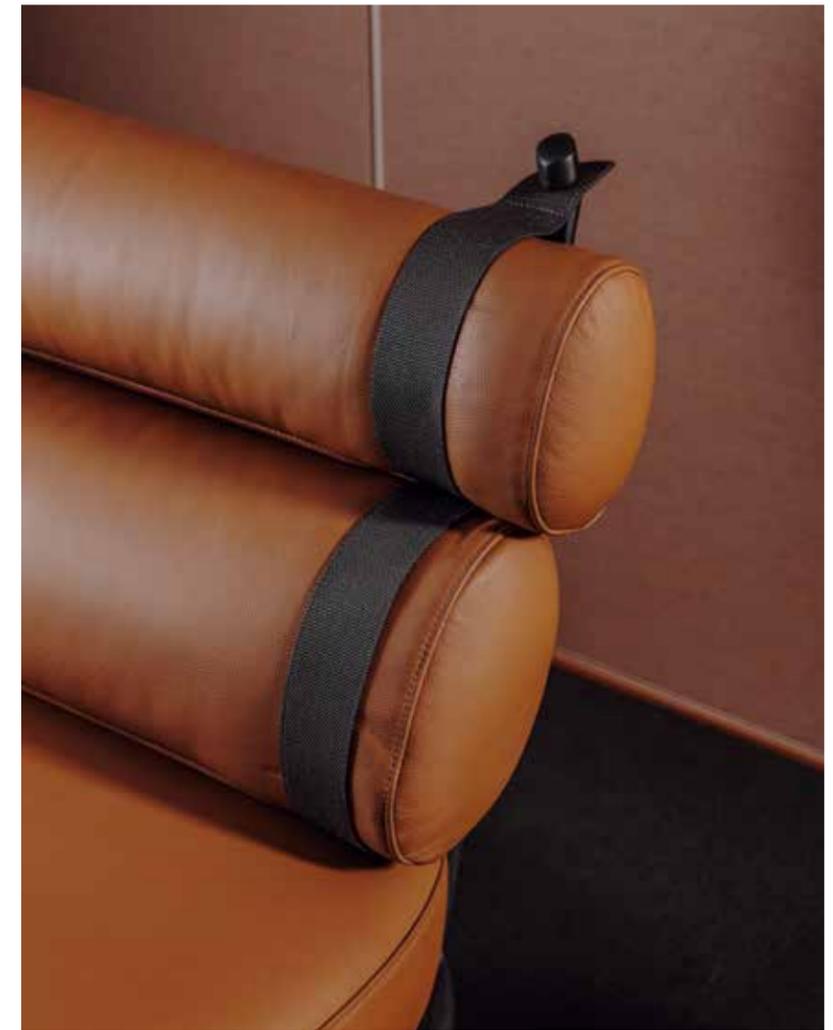

The furniture collection, which is suitable for both indoors and outdoors, is lively and expressive. They feature modern classic designs, with an informal and stimulating language, enriched by contemporary colors and materials.

Roll, by Patricia Urquiola

This ironical intervention on the conventional upholstery converts a regular backrest into two independent 'wraps' connected by colorful straps. A graphical aluminum structure frames the protagonist of this chair, the cushions.

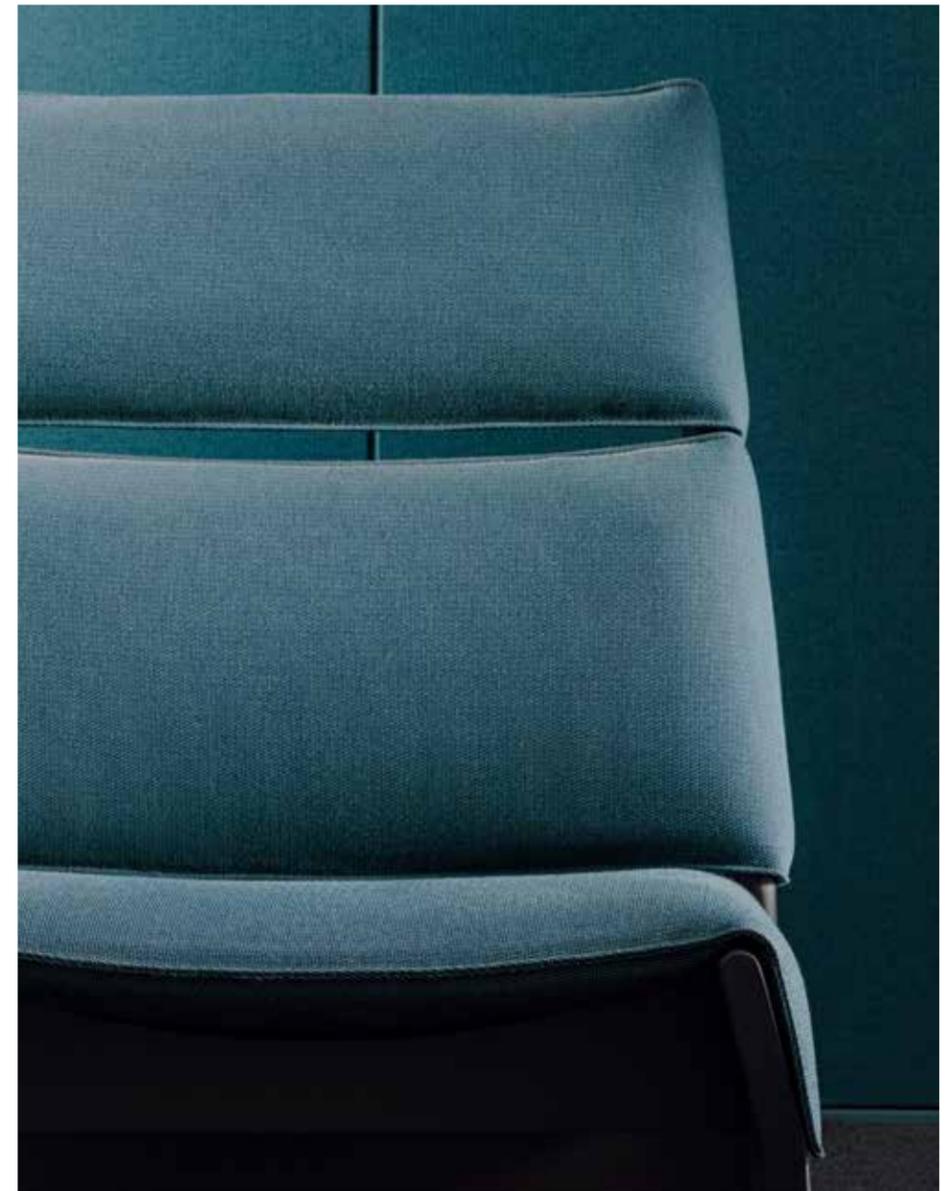

Band, by Patricia Urquiola

The idea behind the Band collection is the breakdown of structure. An object designed using an ensemble of pieces. The chair's design intentionally challenges the classic sophisticated lines of furniture design and becomes something schematic, a conceptual program.

A structure made up of repetitive angular shapes that give center stage to its raw materials and can be formed entirely of aluminum, teak wood or Terrain Fabrics.

Workplace

Stampa, by Erwan & Ronan Bouroullec

A calyx shaped metal shell is inhabited by carefully organized holes made by the technique of punching metal sheets.

Furniture

Park Life, by Jasper Morrison

Park Life is a complete family of furniture for outdoors, whose clean-cut profile is adaptable to a wide range of different situations. Lightweight yet extremely durable, it is easily stacked for transport or winter storage. Its technical sophistication and careful consideration of ergonomics, as well as the great care Jasper Morrison took over how it looks, combine to ensure a long life, both structurally and visually.

Mesh Pouf, by Patricia Urquiola

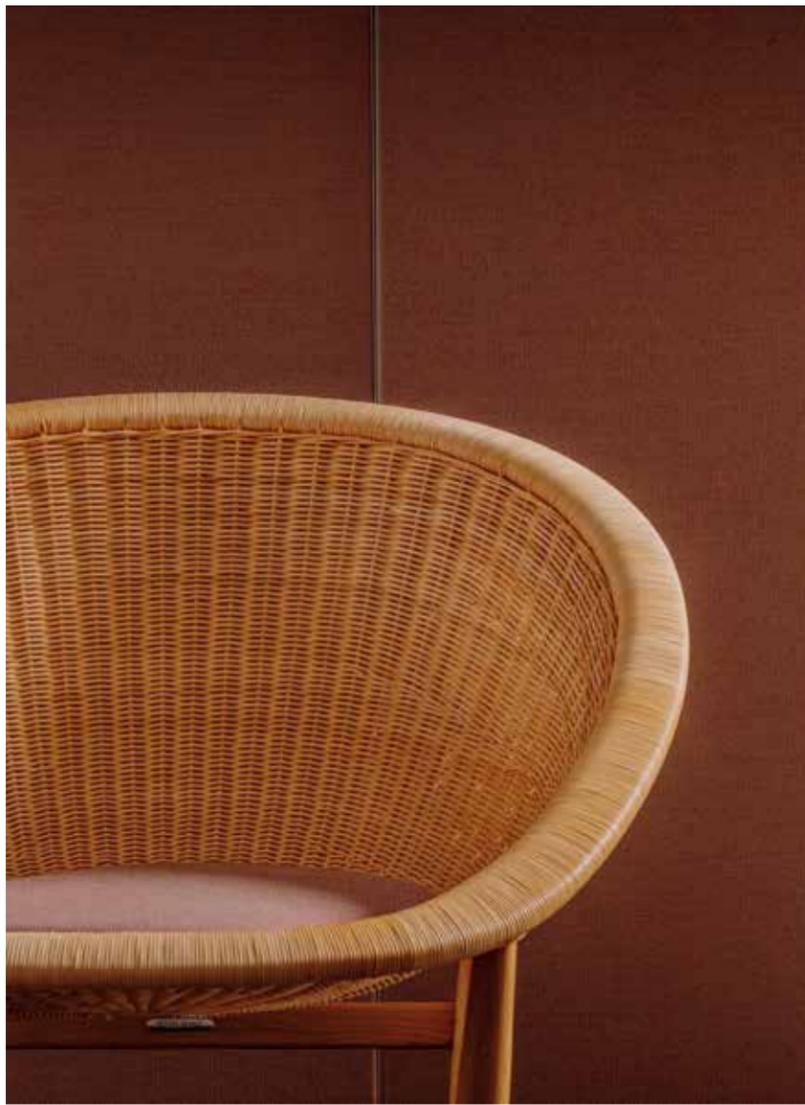

Essential lines and colors define the soft volume of the Mesh pouf. It is a very versatile seat that provides a more informal language to collective environments.

It is available in one seat with a small support backrest that provides comfort while not detracting from the dynamism and functionality of the seat.

The graphic, bold and colorful charm of the Terrain Fabric also means that it can also be used in outdoor spaces.

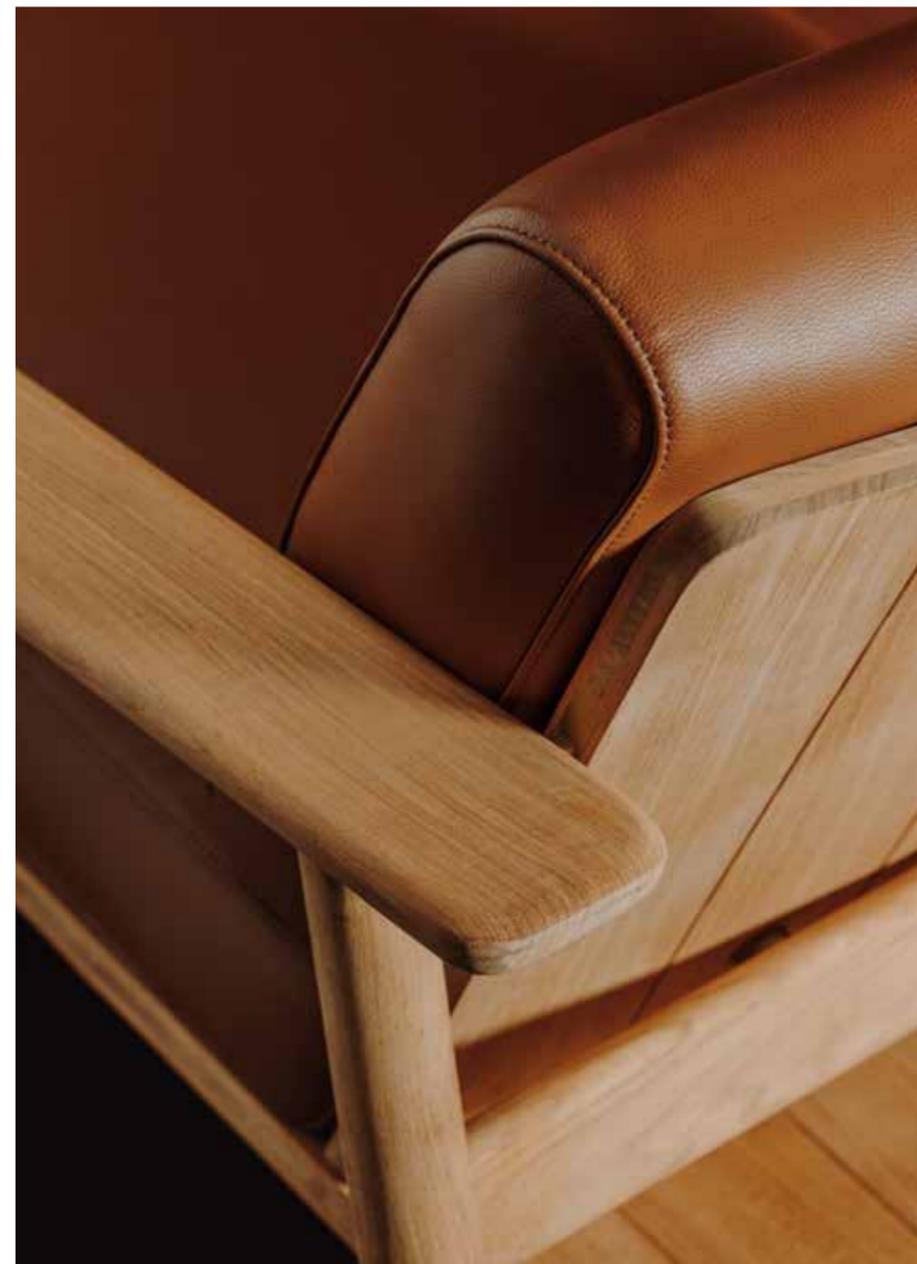

Basket, by Nanna & Jørgen Ditzel

Kettal edits the Basket chair, created in the 1950s by Danish designers Nanna and Jørgen Ditzel. The Basket chair comes in its original Ditzel oak version which is hand-braided in wicker as well as an outdoor version made from artificial fiber and teak.

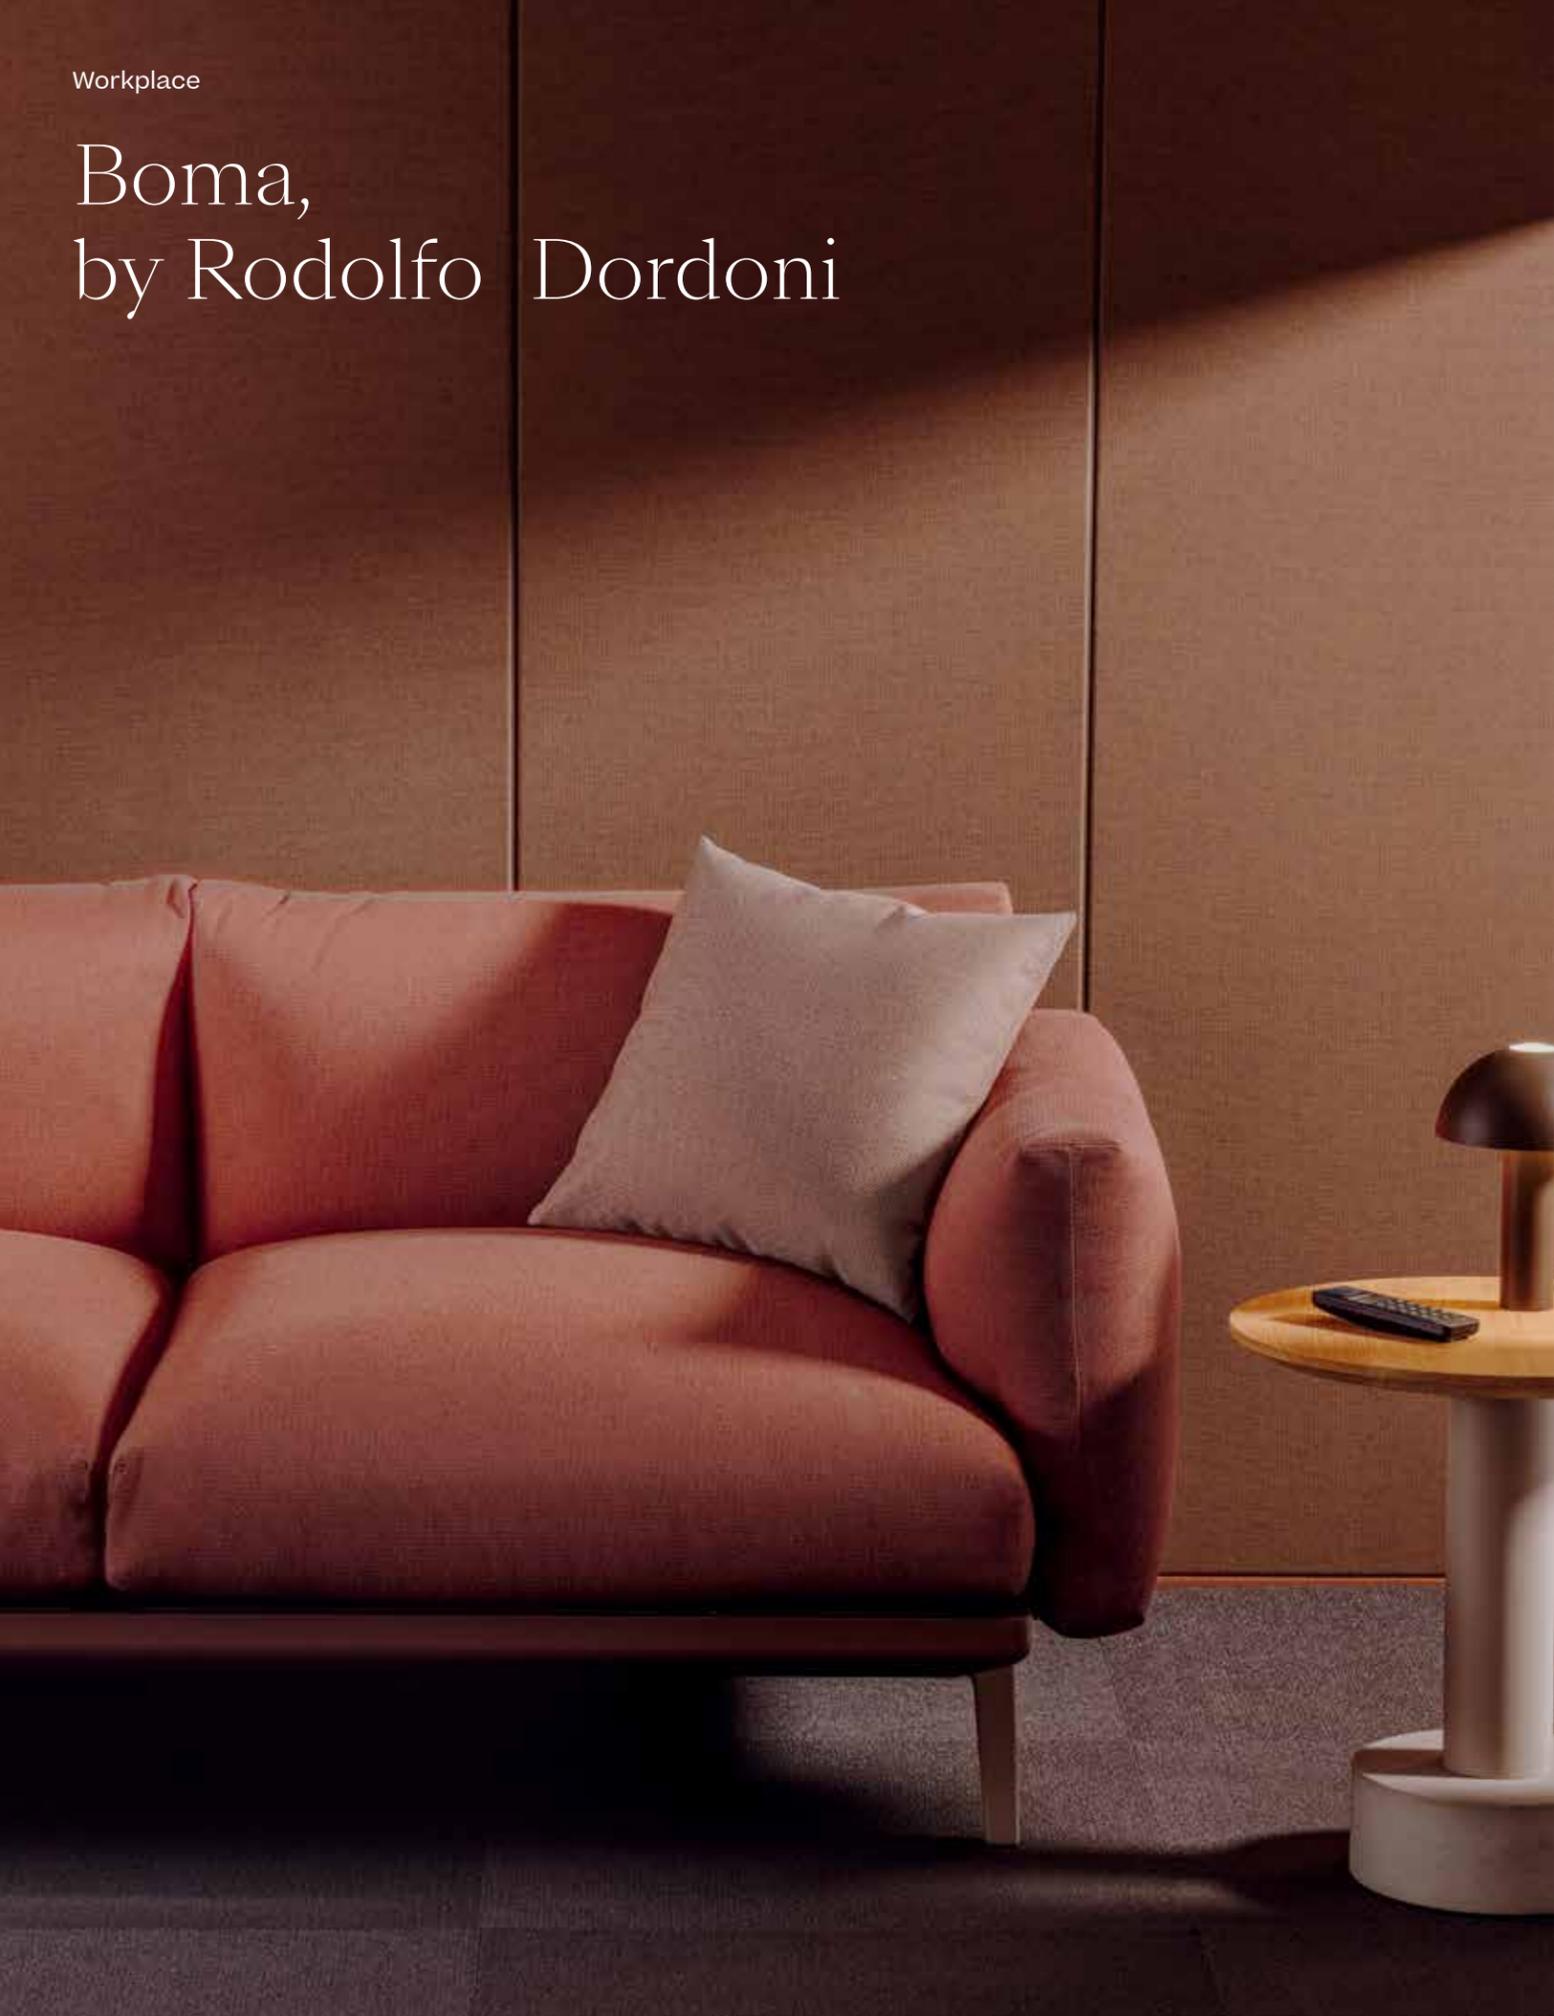

Riva, by Jasper Morrison

The Riva collection of outdoor furniture is above all about achieving a certain atmosphere for the better enjoyment of outdoor space. The plank construction of seat and back follows a long and varied tradition of outdoor chairs made in similar way and which, in this case, provides a high level of comfort and good looks!

Boma, by Rodolfo Dordoni

Furniture

The Boma collection, designed by Rodolfo Dordoni for Kettal, was born from the need of high performances of outdoor environments without sacrificing the increasing demand for comfort that new products have to face.

Therefore, the structure is organized around a frame entirely made of aluminum, capable of hiding in the essentiality of its lines both the quality of the materials used and the possibility of easy articulation in different compositions.

Molo, by Rodolfo Dordoni

This is an example of a modular sofa in its purest form. Its orthogonal geometry is based on rectangular modular design which means it can be easily adapted to suit any situation and optimize the space in which it sits. Each module can be taken apart and reorganized to create new uses and configurations. The design is aesthetically minimalist with intentionally oversized pieces.

On the other hand, the decorative elements have conscientiously not been emphasized in order to give center stage to the various combinations of fabric, colors and carefully selected details.

“Molo, or pier in English, jetée in French and embarcadero in Spanish, is a structure built on the shores of an ocean, sea, lake or river which extends from the land over the water; a mooring place for boats, a rest between trips and a refuge from the swell of the waves. A return to terra firma and people. Molo offers a place of relaxation and reconnection.”

Rodolfo Dordoni

Cala, by Doshi Levien

Cala is a high-backed armchair inspired by the iconic Emanuelle.

This chair has a majestic spatial presence with transparent and light surfaces. The open weave of the rope provides a latticed window for visual privacy while maintaining a connection to the natural elements. Cala may be used for outdoor dining as well as a chair to lounge in. The wide selection of metal coatings, rope colors and cushion fabrics offer many possibilities to tailor the identity of the chair to suit different projects.

Workplace

Village, by Jasper Morrison

A collection for all outdoor situations, from village house to grand café. The lightweight aluminum structure allows easy handling while the neutral language of its form takes nothing away from the scenery. This chair pays respect to the long standing codes of metal stacking outdoor chairs while gently refreshing the look.

Workplace

Net, by Kettal Studio

Furniture

The Kettal Net collection conserves a classic structure with its elegant and smooth lines that give a calming and attractive appearance. Woven cords and aluminum tubing come together to provide a light, handcrafted look.

Sofa O, by Kettal Studio

The "O" series of Sofas combines maximum comfort, minimum details and optimal flexibility in a timeless design. Its simple and smooth shapes can be incorporated into any context. The range of functional modular units allows full customization with corner modules or additional seats to suit any space or purpose, while upholstery options with Kettal's selection of fabrics allow the sofa to find its own personality.

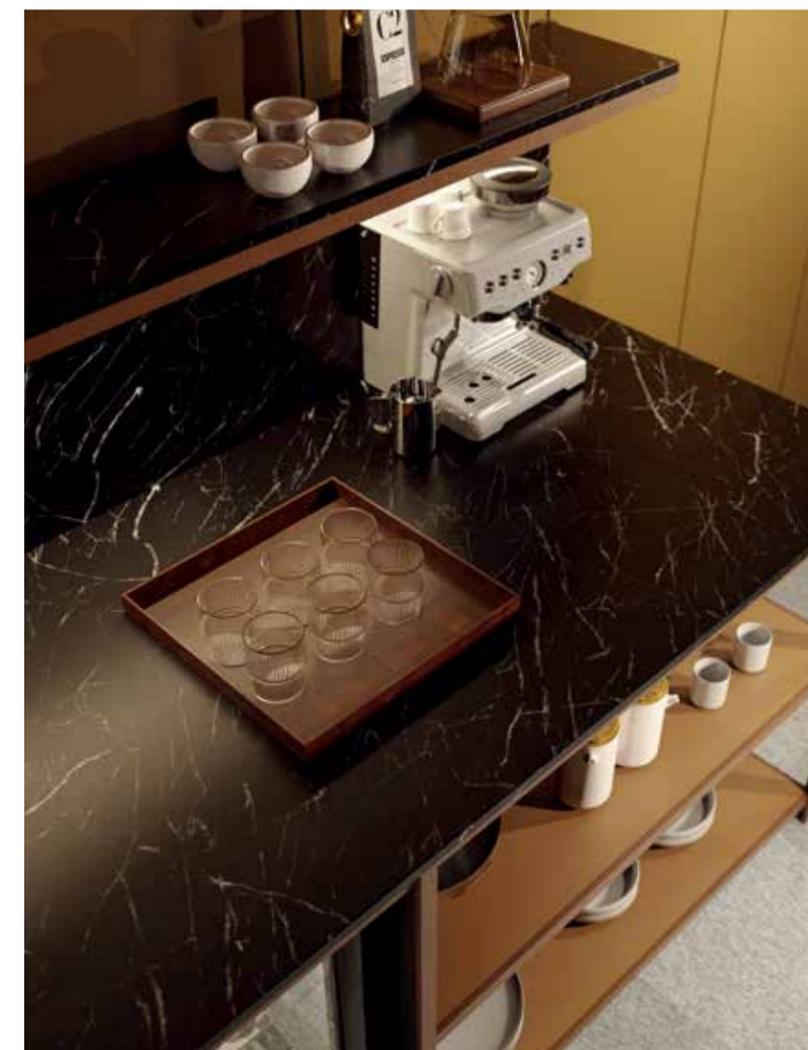

Kitchen

Furniture

This kitchen is a modular structure that offers endless solutions, while maintaining its authentic, bold and linear design. Its configuration is flexible and can be made of a single color, material, or instead, a combination of many to personalize to taste.

The light panels which make the structure vary in material and color: From industrial glass, stoneware, marble or wood, to finishes in lacquered aluminum or textured concrete. The countertops are made of mat ceramic, resembling marble. Finally, its frame structure can be equipped with shelves and LED lighting bars.

Sideboard

The sideboard idea is to create a single autonomous monoblock which can contain all the the necessary elements for your workplace. It can house anything from a refrigerator to office supplies and objects. When its doors close, the sideboard goes back to its perfect block shape.

It is made with extruded aluminum profiles, with Honeycomb side walls, and gray powder coated metal sheet. The sliding doors can be made of teak, wood or oak, and powder coated metal sheets.

The sideboard places special emphasis on the materials and colors of the sliding doors, underlining its elegant proportions and giving a cheerful and carefree touch.

Materials

The materials in the new collection of the Pavilion O system are represented by fabrics, metals, woods, stones and ceramics. All of these worlds form the basis of the library. The intention is to inspire and invite the professional to explore and combine colors, textures and materials to create new exclusive codes for each project and each use.

Recyclable and exclusive materials, to explore an infinite number of combinations.

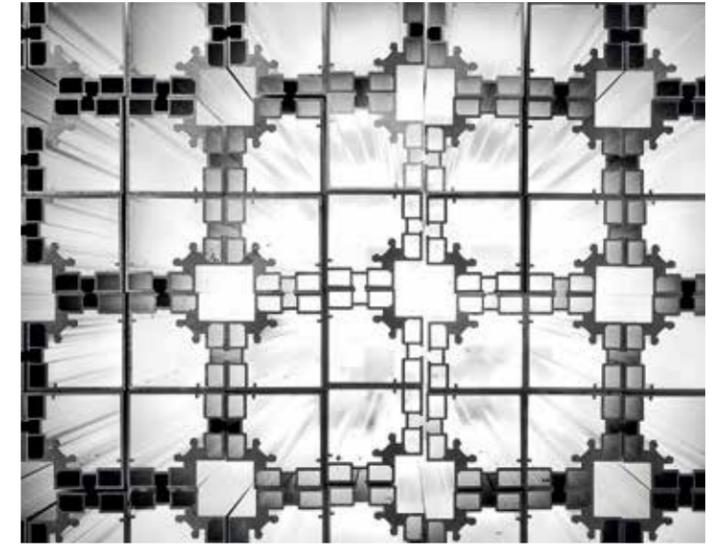

Material technical specifications

Material

Aluminium

The Aluminium 6063 T5 has extruded and hollow profiles of alloy that will be used to build up the structures of each booth.

This is a light and ductile alloy, with great strength and magnificent finishing characteristics. It is ideal for works that require high quality and perfect finishes. It has excellent corrosion resistance, similar to that of stainless steel. Follows the UN-EN-AW 10204 3-1 regulation. Kettal uses 80% recycled aluminum in the extrusion of its profiles in order to reduce greenhouse gases, thus contributing to a more sustainable production of our customers' products.

Soundproof Safety Glass

Our laminated safety glass is made of two or more glass panes joined by one or more coats of polyvinyl butyral (PVB). In the event laminate glass breaks, the PVB coating holds the majority of the glass fragments, meaning the residual strength and hold of the glazing keeps them in place until replaced.

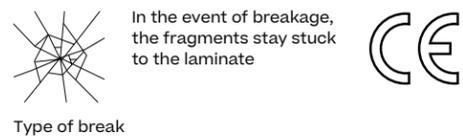

This type of glass filters 99% of UV rays and helps extend the service life of curtains, rugs, fabrics, objects, etc. that are exposed to natural light on a daily basis. It offers protection when there is a need for safety and complies with the requirements of current norms and regulations for homes, shops, or offices.

6mm / 1 PVB CLEAR /6mm (plus)
4mm / 1 PVB CLEAR /4mm (comfort)

Terrain Coating

Electrostatic powder coating process applied. This paint mixes a specific resin that offers greater hardness compared to the paints used in architecture. Terrain Paints are designed to coat aluminium profiles used in architecture and for other substrates where the maximum resistance to the outdoors is needed.

This is a powder coating formulated with polyester resins and free of TGIC, pigments, and additives. These provide excellent exterior durability with very good gloss retention and colour stability.

Characteristics	Min.	Max.	Method
Baking time / temperature	24 to 150 °C / 75,2 to 302 °F	26 to 150 °C / 78,8 to 302 °F	Total time

Relate Fabrics

Relate is a sophisticated twill weave upholstery textile designed by Patricia Urquiola made from Trevira CS, which has a soft hand resembling natural fibres.

The versatile palette for Relate comprises 35 colourways and expresses confident colour combinations by combining warm notes with closely related nuances.

Relate is suitable for contract and private use.

Composition	100% Trevira
Width	Approx. 140 cm
Weight per m ²	Approx. 328/m ²
Fire test	AS/NZS 3837 class 2, BS 5852 Crib 5, BS 5852 part 1 with treatment, DIN 4102 B1, EN 1021-1/2, IMO FTP Code 2010 Part 8, NF D 60 013, NF P 92 503 M1, NFPA 701, SN 198 898 5.2, UNI 9177 Classe 1, US 1 Cal. Bull. 117-2013, ÖNORM B1/Q1
Lightfastness	5-7 (ISO 1-8)
Shrinking	App 2%
Abrasion Martindale	80.000 Martindale
Wash load	Half
Pilling	4-5 (ISO 1-5)
Colour	Slight differences may occur
Produced in environment	Greenguard Certification www.greenguard.org

Terrain Elements

This is a range of premium fabrics for indoor and outdoor furniture. The hydrophobic technology applied works by impeding the liquids that permeate the fabric, forcing them to roll out of the fabric in the form of drops. The fabric protection that brings out the liquids allows for drops of water and oil to be eliminated during normal washing without leaving any traces. Solution dyed acrylic; is dyed before thread is created. A liquid acrylic solution is mixed with dye and then formed into a fiber and spun on thread.

Composition	100% modacrylic, dyed	
Width	160 cm	
Weight per m ²	370 g/m ²	ISO 2286-2
Resistant to superficial wetting	100	ISO 24920
Colour fastness to artificial weathering	7-8 blue scale (8)	ISO 105-B04
Colour fastness to light	7-8 blue scale (8)	ISO 105-B02
Abrasion resistance (Martindale)	50,000 cycles	ISO 12947-2
Abrasion resistance (Wyzenbeek)	15,000 double rubs	ASTM D4157
Cigarette ignition classification	Class 1	NFPA 260
Material resistance to ignition without flame	Pass	IMO FTP Code 2010 · BS 5852 Crib 5 · NF D 60 013 · NFPA 701

Soundproofing Membrane

Our soundproofing Membrane is high-density, polymer-based, and asphalt-free synthetic, to obtain optimum acoustic performance. The effect of this soundproofing membrane is to deaden structure born vibrations by adding mass to your existing surface.

Characteristics	Testing Method	Sound Proofing Membranesy	Units
Density	-	2.010	Kg/m3

Certificates & features

The material is fire retardant, its treatment with resins provides a low degree of flammability, for which it is classified as M1 according to the UNE23727 standard and as B-S1 according to the UNE EN 13501-1 standard

Geo panel

The Geo Panel is an ecological product. It is Bio-sustainable: 80% made of recycled material, and 100% recyclable. It is safe in its installation: It does not cause discomfort or itching as it is based on natural fibers. The Geo Panel is an elastic product. It does not break when folding. Its modulus of elasticity compared to rock wool is 7 times better.

Frequency	Rockwool 4cm	Cotton 3 cm

Ecological awareness. To buy responsibly means to keep for a longer time.

For us at Kettal, ecology is not marketing. It's a very serious matter. We have analyzed the variants of product life cycle to minimize environmental impact as far as possible. Not only in our raw material usage, but also other variables such as CO2 emissions from transport or use and durability.

Raw materials: Not only are they recyclable but also recycled. We study the impact of the material over time. There is no point using a very ecological material if, due to its construction, it needs to be replaced many times during the product's life cycle, thus multiplying the pollution caused by its production process.

Okm production: Trying to produce all components close to our Kettal production center in Barcelona is one of the brand's objectives to reduce CO2. The essential raw materials used at Kettal, such as fabric, rope and aluminum, are produced within a radius of 100km.

Use and durability: We do not build in obsolescence. Each design is aesthetically designed and technically developed to last as long as possible. The longer a product lasts, the less often it has to be replaced and therefore the fewer production processes that have to be carried out.

Accordingly, we at Kettal keep technical drawings and product patterns that are 30 years old in order to be able to replace components and extend the life of the product.

Kettal is developing and manufacturing the Pavilion O systems in Europe with a straight focus on the LEED standard requirements.

Kettal Quality & Certification management team is coordinating the LEED Certification process with an external LEED specialist consultant.

Selection of local partners and suppliers (Short Distance Supply Chain).

Selection of long life cycle manufacturing components and techniques (Aluminum, coating, fabrics, foams, secured glass).

Selection of environmental certified materials (OekoTEX, EPD, FSC).

Selection of recycled and/or recycled materials (Recycled aluminum, recycled foam, recycled fabric).
