# Architecture

# Bringing order, form and structure.

Kettal pavilions seek to bring order, form and structure to outdoor areas. Functionally, they are designed to provide shelter: to shade and cool or protect from the wind and rain.

# Pavilion H

Pavilion H

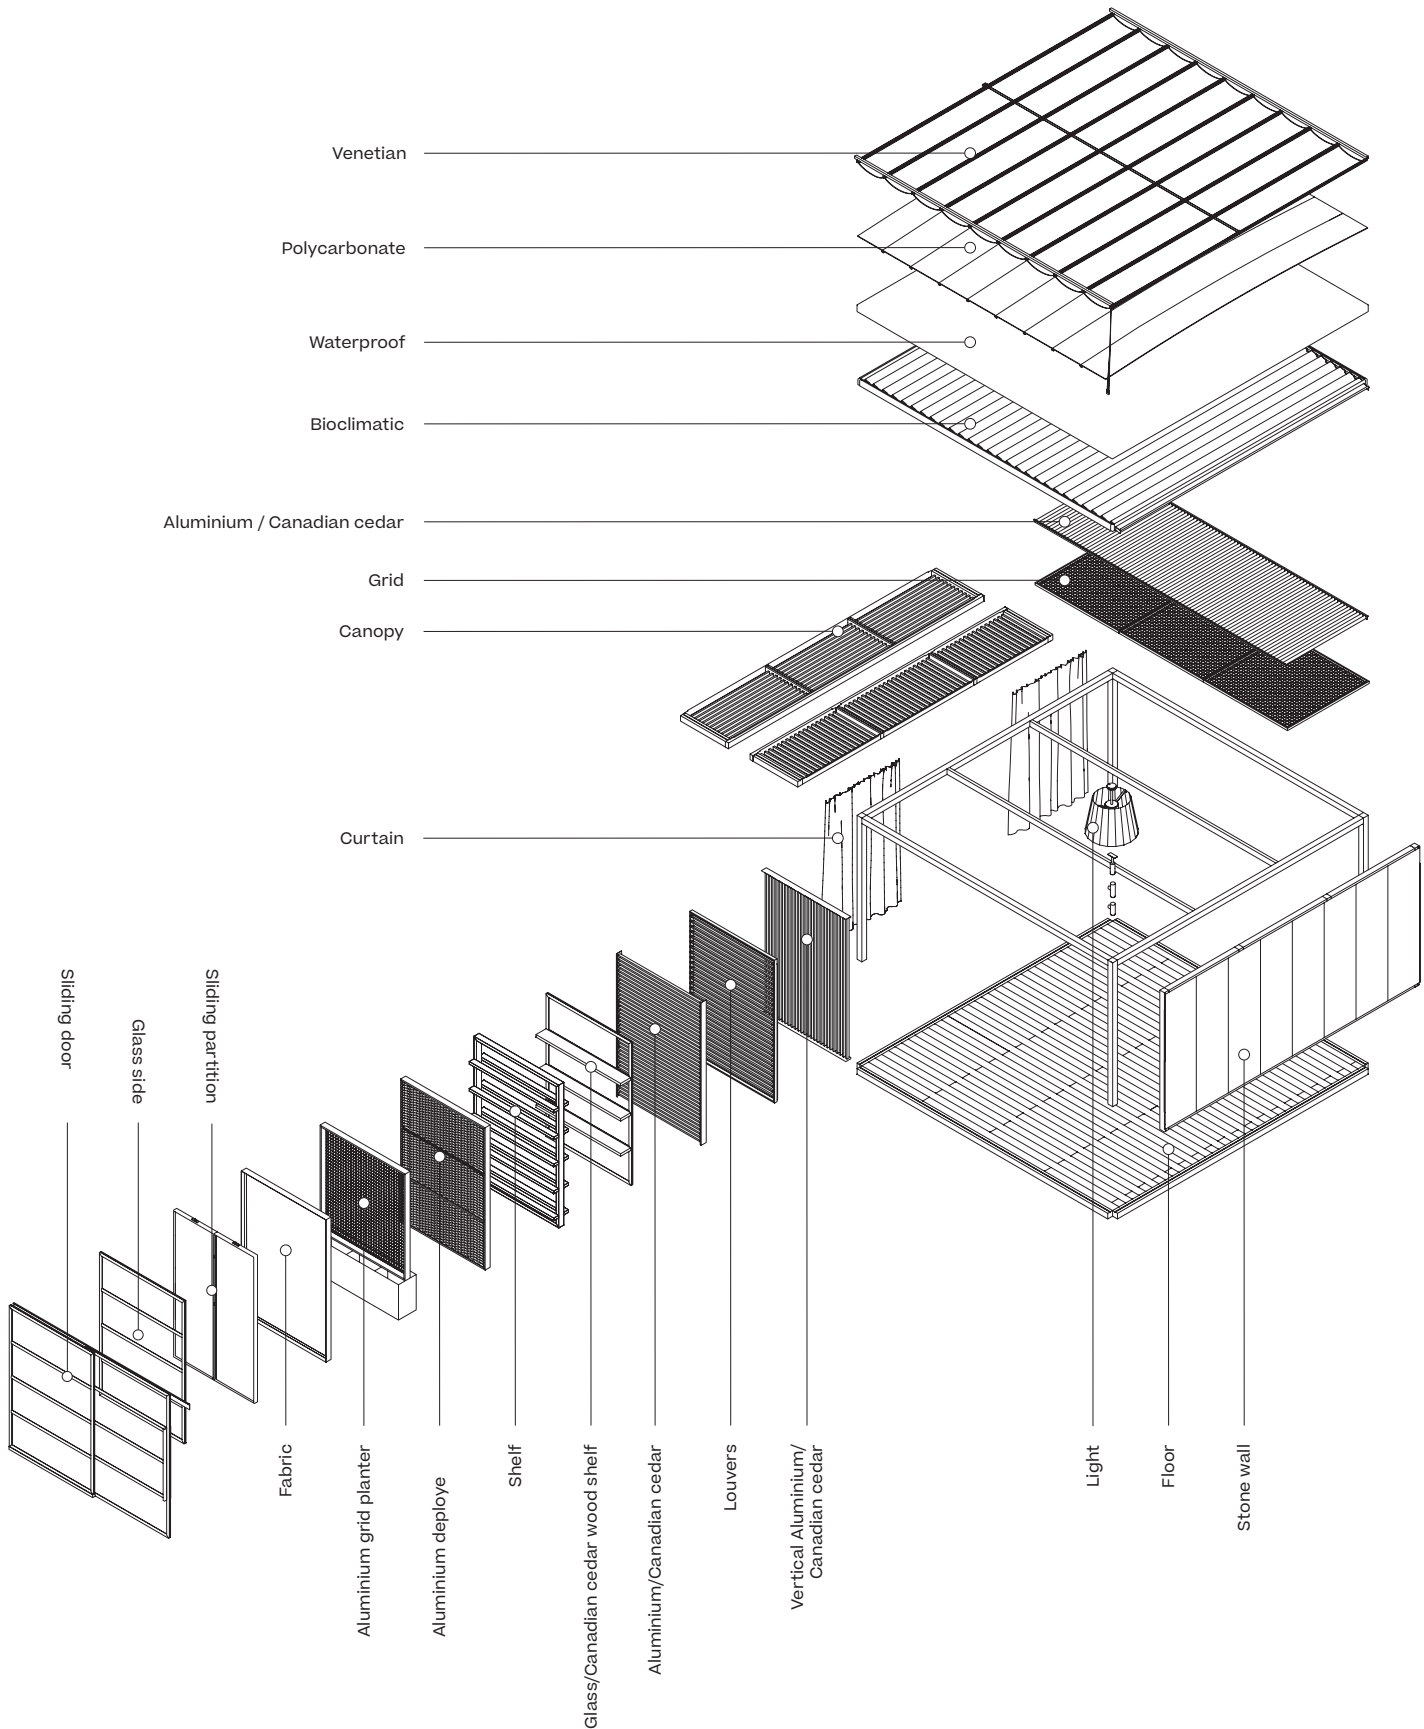

Pavilion H

This new series of pavilions brings the system even closer to architecture, as we have developed more tools for its integration in the architectural environment. The system is now able to adapt more efficiently to different uses and environments: landscapes, architecture, urban environment, maritime, mountain, and so on.

The architecture now has minimal structure, not only for aesthetic reasons, but also to create open spaces that flow freely into each other by means of light, transparency and lightness of structure.

Simple standard sizes      cm/inch

12x6 Double Pavilion

# Pavilion H Lighting

Pavilion lighting is an LED lighting system that offers solutions for any type of Kettal pavilion. All luminaires are designed to be used as a point light source or as a continuous line of light providing efficient visual comfort, where quality and aesthetic features are combined. The entire lighting system is integrated into the architecture of the pavilion, in the structure, wall, adjustable louvres and so on, allowing for the installation of all variants of lighting equipment.

Pavilion L

The rationalist construction seeks to bring order, form and structure to outdoor areas. Functionally, they are designed to provide shelter: to shade and cool or protect from the elements.

These customisable structures are available in various sizes and configurations, suitable for both indoor or outdoor use.

# VDL Penthouse, by Richard Neutra

More info

More info

In 1932, Richard Neutra built his house thanks to a donation from the Dutch philanthropist Dr Van Der Leeuw (hence the acronym VDL). This house is a particularly important example of Richard Neutra's work because it encapsulates all the architectural theories that he first posited in his book *Wie Baut amerika?*, 1927 and later on in his more philosophical reflections *Survival Through Design*, 1953. Seven years later, when the family had grown, he built an annex in the garden. In 1963, the house was devastated by fire, leaving only the annex standing. At that time, Richard Neutra and his son and colleague Dion Neutra rebuilt the house and added a solarium/atrium on top of the original structure. He incorporated everything he had learned over the years in this reconstruction: modularity, natural climate control, water roofs, interaction with the natural environment, technological advances, etc. Apart from being his home, the VDL Research House was also his office. In this building, over 30 years, he designed hundreds of international projects. Some of the most representative architects from the Modern American movement also spent time in his practice as apprentices. The house was also a meeting point for the cultural milieu of those times, with visitors such as Julius Shulman, Frank Lloyd Wright, Alvar Aalto, Charles and Ray Eames, Jørn Urtzon and László Moholy-Nagy. In 1990, on the death of Dione Neutra, Richard Neutra's wife and Dion's mother, the house was donated to the California State Polytechnic University, Pomona.

VDL Research House

Daybed

Cottage

Daybed

Daybed uses modern architectural forms that highlight the nature of outdoor environments.

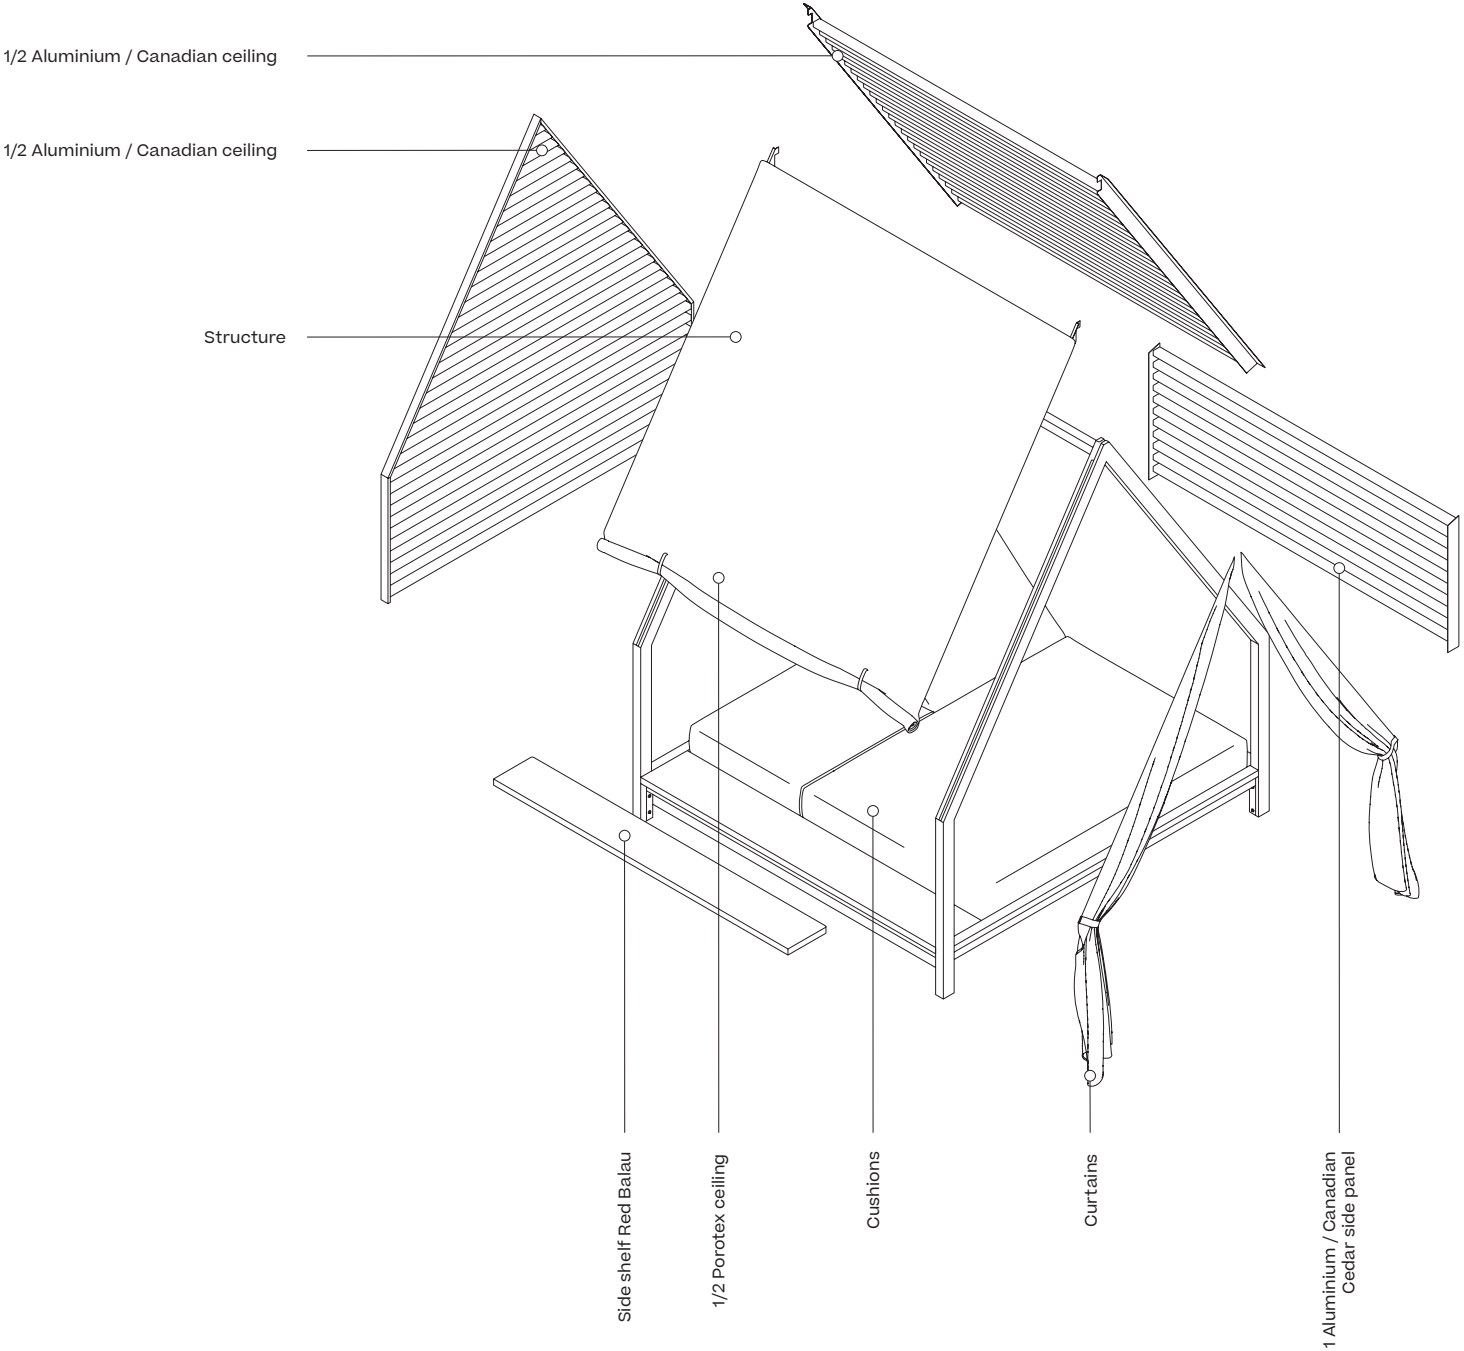

Cottage

Cottage is a charming spot, a place in which to relax in comfort, meditate, rest or simply pass the time in the company of a good book, enjoying the air and the light. It is the definitive refuge in which to enjoy the outdoors.

Cottage

# Furniture

Versatile and timeless furniture designed by some of the most important names in the international design scene.

The furniture collection, which is suitable for both indoors and outdoors, is lively and expressive. It features modern classic designs, with an informal and stimulating language, enriched by contemporary colors and materials.

# Plumon, by Patricia Urquiola

The new outdoor family designed by Patricia Urquiola for Kettal is based on the concept of clothing, on dressing and undressing furniture. Adopting a tailoring approach, Patricia Urquiola designs the new family with a reference to the characteristic Brazilian spirit, which lives in abundant, roomy, comfortable furnishings, somehow evocative of distant landscapes and cultures. For Plumon, Urquiola designs a light structure, on which a tailored and padded dress is ‘moored’, wrapped. This

ribbed padding, characterized by stitching, as well as being an aesthetic figure, fulfills the comfort of the product. It is the fit that guides the aesthetics. With a few simple gestures, the dress is placed on the rigid teak structure and embraces it. An extreme ease of use that becomes a real plus for an outdoor collection. A comfort that is also emphasized visually, thanks to the padded dress that generously also embraces the armrests and the outside of the backrest.

KS7400500

# Giro, by Vincent Van Duysen

The core idea and insight behind Giro was a different usage of the rope. It is sewn together in order to create the shape of the product itself. A big source of inspiration was the Orkney Chair. This classic inspired Vincent to draw inspiration from the past with an eye on today and Kettal's technological expertise. Originally based on a natural rope material, it has been reinterpreted through the use of the very sustainable polyprollante material which can face all kinds of weather.

# Tou, by Naoto Fukasawa

Tou is our modest tribute to the ancient handicraft of rattan and reed wickerwork, an essential element in the development of both Western and Eastern cultures. Historically, it has been used for all kinds of domestic utensils, furniture and more. The materials are simple and completely natural, but the internal structure of the stem consists of hundreds of cavities, making it both strong and light.

The manufacture combines traditional manual techniques with much more industrial processes. Instead of using the most common form of weaving, we use striped vertical lines, which are lighter and much more expressive than mesh. The outline is smooth and soft, following the natural shapes provided by the material.

# Altar, by Miguel Milá

Miguel Milá designed this table in the mid-sixties as an altar for his wedding. It later became a table for everyday use, but was never produced. As if he were a master craftsman, Miguel Milá designed this piece based on the art of simplicity and efficiency. Its shape hides its complexity, but at the same time

reveals the wood's own character, giving it life and prominence. Its constructive logic makes it strong enough in terms of structure, but formally a beautiful piece. The beauty of logic and common sense understands neither time nor trend.

Dining table

KSA400200

Dining table

KSA400100

# Arc, by Kettal studio

The Arc collection features an enveloping backrest based on fundamental geometry: a constant radius arc. It shows restrained, elegant proportions. The light aluminium frame clearly expresses a desire to maintain armchair tradition. The backrest features simple yet sophisticated braided

strips, while the seat is padded with polyurethane foam covered in matching fabric and the fabric cushion has a removable cover. The collection is used mostly in hotels, in lobbies and rooms, on cruise ships and also in domestic settings as light furniture in sofa and dining areas.

Dining armchair

# Pad, by Kettal studio

Kettal has made deck chairs for decades, and always of the same excellent quality. This enables us to offer a product that garners all that experience: comfort, durability, stackability and so on. Pad is a sturdy, long-lasting deck chair system designed for relaxing in comfort. It is built to withstand continued

use. The sturdy seat guys and backrest can be easily changed. The ample seat surface and sandwich-style structure make it exceptionally comfortable. With a stretch guy attached to the aluminium frame and optional cushions that add extra comfort.

Deckchair

KSA700100

# Il Colonnato, by Mario Bellini

In this project, Mario Bellini took his inspiration from a basic elemental structure in architecture. His design emulated the colonnade of classical architecture, in which a sequence of columns supports a portico, in this case a table top. The base is a visually closed volume, despite being materially open. When seen from a different viewpoint, perception changes completely, as the columns no longer overlap and the space appears empty.

# Ringer, by Michael Anastassiades

The Ringer Collection is the first collaboration between Kettal and Michael Anastassiades, and it was conceived as a minimalist approach to cafe dining furniture. The title references the traditional Game of Horseshoes, and links to the gesture of the armrest sitting on top of the legs.

# Molo, by Rodolfo Dordoni

This is an example of a modular sofa in its purest form. Its orthogonal geometry is based on a rectangular modularity design, which means it can be easily adapted to suit any situation and optimize the space in which it sits. Each module can be taken apart and re-organized, creating new uses and configurations.

The design is aesthetically minimalistic with intentionally oversized pieces. On the other hand, the decorative elements have been consciously de-emphasized in order to give centre stage to the various combinations of fabric, colours and carefully selected details.

# Band, by Patricia Urquiola

The idea behind the Band collection is the breakdown of structure. It is an object designed using an ensemble of pieces. The chair's design intentionally challenges the classic sophisticated lines of furniture design and becomes something schematic — a conceptual program. It is a structure made up of repetitive angular shapes that give centre stage to its raw materials and it can be formed entirely of aluminum or teak wood, as well as Terrain Fabrics.

# Vimini, by Patricia Urquiola

Vimini means wicker in Italian and it also sounds like Bimini, the name of an island the designer likes. It uses just the right amount of outdoor wicker with a rougher wooden frame. It does not have the same modernist spirit as the Basket (which the original inspiration came from) but it is familiar enough that, when you get close, it stirs a memory and makes one feel at home. That is what it is, more or less — an object of memory.

# Cala, by Doshi Levien

Cala is a high-backed armchair inspired by the iconic Emanuelle. The chair has a majestic spatial presence with transparent and light surfaces. The open weave of the rope provides a latticed window for visual privacy while maintaining a connection to the natural elements.

Cala may be used for outdoor dining as well as a chair to lounge in. The wide selection of metal coatings, rope colours and cushion fabrics offer many possibilities to tailor the identity of the chair to suit different projects.

# Bitta, by Rodolfo Dordoni

Grand Bitta is characterized by a combination of aluminum and teak legs, seats of braided polyester and comfortable cushions, with teak or stone table tops - all while using all waterproof materials. “The intention of the designer was to create dense braiding that would

still let the air through, reminiscent of the braiding of the ropes used to moor boats (hence the name Bitta, which means ‘mooring’ in Italian), which makes the pieces look lightweight but, at the same time, they look just like cozy nests in natural colors to sit back and relax in.”

# Maia, by Patricia Urquiola

Like an architecture that is in keeping with its surroundings, the Mala collection designed has a natural lightness and elegance. The design of the artisan braiding, the sturdiness of the aluminum frame and the new, Porotex and chenille fabric collection create a combination that oozes energy.

# Park Life, by Jasper Morisson

Park Life is a complete family of furniture for outdoors, whose clean cut profile is adaptable to a wide range of situations. Lightweight, yet extremely durable, it is easily stacked for transport or winter storage. With technical sophistication, careful ergonomics and pleasing looks, Park Life offers a long life both structurally and visually.

# Landscape, by Kettal Studio

Landscape aims to be part of a project. It is not understood as an item apart, but instead relates to its environment and melds with it. It is the project that is important, not the product, and this is its essence. Its rationalist construction seeks to bring order, form and structure to the outdoor space. Functionally, it is designed to provide shelter: to shade and cool or protect from the elements.

# Lighting

Elegance and technology meet  
to improve the lighting of your spaces.

The different light designs can adapt to all situations:  
conversation, concentration, relaxation and more.  
We now know that an adequate amount of light and a  
clever placement improves mood and energy levels.  
Form, function and performance is driving the fusion  
of technology and emotion.

# Half Dome, by Naoto Fukasawa

## Half Dome

Never the same Half Dome, never the same light or the same mood. Half Dome is a great mountain with endless variations of lighting and sky situations and seasonal characteristics; the many images reflect the varied creative responses to this remarkable granite monolith. The dimension of Half Dome light follows our image of the moonlight.

# Bela lamp, by Doshi Levien

Bela is a colorful and versatile lamp with a continuous length of rope in a form referencing the texture and lightness of traditional handwoven lanterns. Every year in India there is a kite festival and the streets are lined with enormous spinning frames wound with colourful kite string. These light wooden structures gave Doshi Levien the idea for the frames or spools onto which the Bela ropes are clipped. It can be placed directly on the floor, suspended or used as a standing lamp.

# Dots, by Kettal Studio

Dots lamps, manufactured in aluminium with LED lights, are available in two versions: floor lamp with a circular base and planter lamp with a base that can be fastened to the ground. The new Dots lamps have been developed for indoor and outdoor use. The height and direction can be adjusted to focus the light where it is needed. The lamp features a waterproof switch and includes a USA plug.

# Mia, by Michel Charlot

Mia is a family of nomadic lamps built around an acid-treated glass diffuser which is protected by a large polypropylene lampshade. Both are held in place by a clever wire structure. It was important to have the lamps completely waterproof. By achieving this, the Mia allows for a wide range of applications and it is suitable for outdoor use. The Mia series comprises multiple variations, including a small battery powered lamp.

# Shadow

# Selectively shade your outdoor spaces.

The humble parasol has a vital role to play in maximizing your enjoyment of outdoor spaces. It ushers away the harsh sunlight and it should be an unassuming but elegant presence on the patio.

# Paladin, by Konstantin Grcic

Paladin is a wooden parasol for domestic and public use. Its canopy appears to be floating on top of an elegantly shaped mast. The design employs a mechanical principle which incorporates the tension of the canopy into its structural logic. With only the mast and four movable struts, the textile absorbs the tensile forces of the parasol when unfolded. The mast goes right through the center of the canopy,

leaving a central hole that is acting as an indirect skylight and allowing for air circulation. The wooden elements are made in natural teak with a reinforcing core in aluminium. The mechanical joints and fasteners in aluminium and stainless steel are designed to minimize the material input while offering maximum performance.

Paladin

KSB100100

# Meteo S, by Konstantin Grcic

Meteo aims to explore the largely untapped design potential of modern parasols. Protection from direct sunlight is becoming a quintessential condition for our health and wellbeing. The increasing impact of parasols and other sunshade systems on the planning and furnishing of modern cityscapes, recreational resorts and private dwellings gives rise to the challenge of a renewed approach to this specialized product category.

# Objects

Offering additional options while complementing the collections.

A selection of objects that complement indoor and outdoor spaces. They will dovetail aesthetically and functionally with your overall project.

# Superfan

by Michael Anastassiades

Superfan is a tri-blade fan whose geometry is simply defined through three angled blades, meeting at the rotating axis. All design decisions are made to maximise performance and improve efficiency: the angle of the blades, the lightness of the aluminium material and the selection of the motor for accurate speed control and quiet function.

The two fan versions operate with equal efficiency both with and without a pendant, offering flexibility of use for different ceiling heights.

# Base Kitchen by Kettal Studio

This modular kitchen structure offers infinite solutions. An aluminium supporting frame can be teamed with a number of stoneware modules in various combinations whilst maintaining its authentic linear design. This design features clean, smooth surfaces, with no corners, for easy cleaning and maintenance.

It is available in two types of stoneware and two Iroko wood finishes for the doors. The modular aluminium structure comes in black only. Along with basic kitchen functions, it has a gas barbecue and can include several burners with a support for a wok. It can also include a bar.

# Ecological awareness

# Choosing materials —being a large business comes with large responsibilities

Choosing materials for us is about making responsible decisions. When we're not able to use renewable resources, we aim for recycled or recyclable ones.

# Ecological awareness.

## To buy responsibly means to keep for a longer time.

For us at Kettal, ecology is not marketing. It’s a very serious matter. We have analyzed the variants of product life cycle to minimize environmental impact as far as possible. Not only in our raw material usage, but also other variables such as CO2 emissions from transport or use and durability.

Raw materials: Not only are they recyclable but also recycled. We study the impact of the material over time. There is no point using a very ecological material if, due to its construction, it needs to be replaced many times during the product’s life cycle, thus multiplying the pollution caused by its production process.

Okm production: Trying to produce all components close to our Kettal production center in Barcelon is one of the brand’s objectives to reduce CO2. The essential raw materials used at Kettal, such as fabric, rope and aluminum, are produced within a radius of 100km.

Use and durability: We do not build in obsolescence. Each design is aesthetically designed and technically developed to last as long as possible. The longer a product lasts, the less often it has to be replaced and therefore the fewer production processes that have to be carried out.

Accordingly, we at Kettal keep technical drawings and product patterns that are 30 years old in order to be able to replace components and extend the life of the product.

Kettal is developing and manufacturings in Europe with a straight focus on the LEED standard requirements. Kettal Quality & Certification management team is

coordinating the LEED Certification process with an external LEED specialist consultant.

Selection of local partners and suppliers (Short Distance Supply Chain).

Selection of long life cycle manufacturing components and techniques (Aluminum, coating, fabrics, foams, secured glass).

Selection of environmental certified materials (OekoTEX, EPD, FSC).

Selection of recycled and/or recycled materials (Recycled aluminum, recycled foam, recycled fabric).

Waranty terms

For domestic use, all products, except for cushions, covers and fabrics (including textiles), are guaranteed for a period of five years against any manufacturing defect that affects their suitability for use. This applies to normal conditions of use and maintenance. This guarantee does not apply to faults or imperfections resulting from the passage of time or normal wear and tear. Circumstances not covered by this guarantee include, but are not limited to, the fading or change in shade of colours, changes in wood texture, scratches resulting from use, etc. For non-domestic use, by the hotel and catering industry and collectives for example, all products, except cushions, covers and fabrics, are guaranteed for a period of two years. This guarantee is subject to the same conditions as outlined above.
