

Tekiò ('adaptation' in Japanese) consists of a lighting system based on LED wstructures covered with paper modules. By combining various modules, Tekiò presents vertical pendant lamps, horizontal lines and circles.
 In its design Anthony Dickens was inspired by the traditional Japanese paper lantern that is ubiquitous throughout Asia, and in its production Santa & Cole has worked with some of Japan's best craftsmen, combining traditional processes, high quality materials and new technologies.
 Paper is a ductile, even malleable material; its folds makes it more resistant and time alters and improves its translucence.
